*Note by the General Secretariat*

This edition of Appendix 27 Aer2 incorporates the changes adopted by the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, and the World Administrative Radio Conference, Geneva, 1979.

In conformity with the new numbering of the Radio Regulations the reference to Resolution No. Aer2-3, on pages 24 and 25 (provisions 27/50 and 27/54), should now read "Resolution No. 402". On page 25 (provision 27/56), the reference to No. 694 of the Radio Regulations should now read "No. 1804".

The text of Appendix 27 Aer2, as adopted by the WARC on the Aeronautical Mobile (R) Service, 1978, contains references to certain classes of emissions. A new method for classifying emissions has since been adopted by the World Administrative Radio Conference, 1979. A description of the new symbols appears in Article 4 and Appendix 6 of the Radio Regulations.

Provisions 27/185E to 27/185I define the boundaries of the five World-wide Allotment Areas established by the WARC on the Aeronautical Mobile (R) Service, Geneva, 1978. In order to show these boundaries without in any way modifying the maps attached to the Final Acts of this Conference, three new transparencies have been produced. These transparencies are intended to be used with maps 2, 5 and 7, which show the Regional and Domestic Air Route Areas.

###### Definitions

1. *Frequency Allotment Plan*

**27/1** A plan which shows the frequencies to be used in particular areas without specifying the stations to which the frequencies are to be assigned.

**27/2** 2. The terms to express the different methods of frequency distribution as used in this Appendix have the following meanings:

Frequency distribution to:	French	English	Spanish
Services	Attribution (attribuer)	Allocation (to allocate)	Atribución (atribuir)
Areas	Allotissement (allotir)	Allotment (to allot)	Adjudicación (adjudicar)
Stations	Assignation (assigner)	Assignment (to assign)	Asignación (asignar)

**27/3** 3. *A Major World Air Route* is a long-distance route, made up of one or more segments, essentially international in character, extending through more than one country and requiring long-distance communication facilities.

**27/4** 4. *A Major World Air Route Area (MWARA)* is an area embracing a certain number of Major World Air Routes, which generally follow the same traffic pattern and are so related geographically that the same frequency families may logically be applied.

- 27/5** 5. *Regional and Domestic Air Routes* are all those using the Aeronautical Mobile (R) Service not covered by the definition of a Major World Air Route in No. 27/3.
- 27/6** 6. *A Regional and Domestic Air Route Area (RDARA)* is an area embracing a certain number of the air routes defined in No. 27/5.
- 27/7** 7. *A VOLMET Allotment Area* is an area encompassing all points where an HF broadcast facility might be required to operate on a family of frequencies common to the area.
- 27/8** 8. *A VOLMET Reception Area* is an area within which aircraft should be able to receive broadcasts from one or more stations in the associated VOLMET Allotment Area.
- 27/8A** 8A. *A World-Wide Allotment Area* is one in which frequencies are allotted to provide long-distance communication between an aeronautical station within that allotment area and aircraft operating anywhere in the world <sup>1</sup>.
- 27/9** 9. *A Family of Frequencies in the Aeronautical Mobile (R) Service* contains two or more frequencies selected from different aeronautical mobile (R) bands and is intended to permit communication at any time within the authorized area of use (see Nos. 27/189 to 27/207A) between aircraft stations and appropriate aeronautical stations.

## Section II

### **Technical and Operational Principles used for the Establishment of the Plan of Allotment of Frequencies in the Aeronautical Mobile (R) Service**

#### **A. Channel characteristics and utilization**

1. *Frequency separation*
- 27/10** 1.1 The frequency separation between carrier (reference) frequencies shall be 3 kHz. This is adequate to permit communications using the classes of emission referred to in Nos. 27/49-27/52 in the frequency bands between 2 850 kHz and 22 000 kHz allocated exclusively to the aeronautical mobile (R) service. The carrier (reference) frequency of the channels in the Plan shall be an integral multiple of 1 kHz.
- 27/11** 1.2 For radiotelephone emissions the audio frequencies will be limited to between 300 and 2 700 Hz and the occupied bandwidth of other authorized emissions will not exceed the upper limit of A3J emissions. In specifying these limits, however, no restriction in their extension is implied in so far as emissions other than A3J are concerned, provided that the limits of unwanted emissions are met (see Nos. 27/66B and 27/66C).

---

**27/8A.1** <sup>1</sup> The type of communication referred to in 27/8A may be regulated by administrations.

**27/11A** *Note:* For aircraft and aeronautical station transmitter types first installed before 1 February 1983, the audio frequencies will be limited to 3 000 Hz.

**27/11B** 1.3 On account of the possibility of interference, a given channel should not be used in the same allotment area for radiotelephony and data transmissions.

**27/12** 1.4 The use of channels derived from the frequencies indicated in No. 27/16 for the various classes of emissions other than A3J and A2H will be subject to special arrangements by the administrations concerned and affected in order to avoid harmful interference which may result from the simultaneous use of the same channel for several classes of emission.

**27/13** SUP

**27/14** 1.5 To preclude the possibility of interference, adjacent channels in the list of frequencies in No. 27/16 have not as a rule been allotted to the same MWARA, RDARA or VOLMET areas. However, to satisfy particular needs, the administrations concerned may conclude special arrangements for the assignment of adjacent channels derived from the frequencies in the table (No. 27/16).

**27/15** 1.6 The arrangements contemplated in Nos. 27/12 and 27/14 should be made under the Articles of the International Telecommunication Convention and the Radio Regulations entitled "Special Arrangements"\*.

## 2. *Frequencies allotted*

**27/16** The list of carrier (reference) frequencies allotted in the bands allocated exclusively to the aeronautical mobile (R) service, on the basis of the frequency separation provided for under No. 27/10, will be found in the following table <sup>1</sup>:

---

**27/16.1** <sup>1</sup> To calculate the assigned frequency from a carrier (reference) frequency given in the table, reference should be made to Nos. 27/72, 27/72B and 27/73.

\* *Note by the General Secretariat:* The relevant article in the Radio Regulations is now Article 7 entitled "Special Agreements".

- 27/20** 4. The International Civil Aviation Organization (ICAO) coordinates radiocommunications of the aeronautical mobile (R) service with international aeronautical operations and this Organization should be consulted in all appropriate cases in the operational use of the frequencies in the Plan.

**5. *Adaptation of Allotment Procedure***

- 27/21** It is recognized that not all the sharing possibilities have been exhausted in the Allotment Plan contained in this Appendix. Therefore, in order to satisfy particular operational requirements which are not otherwise met by this Allotment Plan, Administrations may assign frequencies from the aeronautical mobile (R) bands in areas other than those to which they are allotted in this Plan. However, the use of the frequencies so assigned must not reduce the protection to the same frequencies in the areas where they are allotted by the Plan below that determined by the application of the procedure defined in Part I, Section II B of this Appendix.

- 27/22** 6. When necessary to satisfy the needs of international air operations Administrations may adapt the allotment procedure for the assignment of aeronautical mobile (R) frequencies, which assignments shall then be the subject of prior agreement between Administrations affected.

- 27/23** 7. The coordination described in No. 27/20 shall be effected where appropriate and desirable for the efficient utilization of the frequencies in question, and especially when the procedures of No. 27/22 are unsatisfactory.

**B. Interference range contours**

- 27/24** 1. ***General provisions***

- 27/24A** 1.1 ***Service range***

Due to factors such as the power of the transmitter, propagation loss, noise level, etc., there is a limit to the distance at which reliable communications can be effected between an aeronautical station and an aircraft station. This limiting distance, based on the weakest path, is the service range. The boundary of the air route area is often assumed to be the limiting distance.

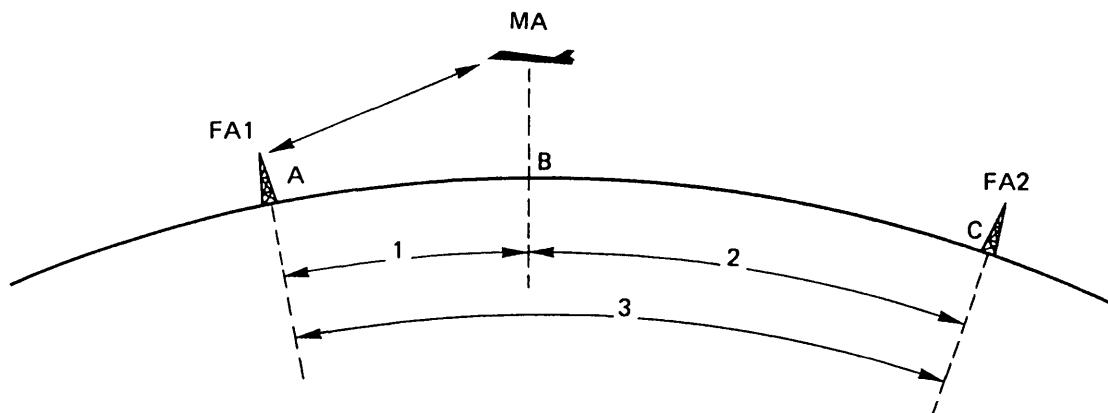

27/24B 1.2 *Interference range*

This is the minimum distance from the limit of the service range of a wanted station to a potentially interfering station needed to produce a protection ratio of 15 dB. This protection ratio is between the wanted signal at an aircraft station at the limit of the service range and the signal from a potentially interfering aeronautical station operating on the same frequency. The interference range has been calculated for different frequencies indicated on the data tables contained in Nos. 27/39-27/48 for day and night conditions, for median latitudes, for conditions of median sunspot activity and for a mean effective radiated power of 1 kW at the aeronautical station.

27/24C 1.3 *Repetition distance*

This is the distance at which a frequency may be successfully shared and is equal to the sum of the service range and the interference range.

## 27/24D 1.4 Figure 1 illustrates the use of the concept of interference range in frequency planning through the determination of repetition distance.

FA1 = aeronautical station in communication with aircraft station MA.

FA2 = aeronautical station in communication with aircraft stations other than MA.

MA = aircraft station in communication with aeronautical station FA1.

1 = service range AB.

2 = interference range CB.

3 = repetition distance AC.

FIGURE 1

*Service range, interference range, repetition distance*

- 27/24E**      1.5 The transparencies associated with this Appendix show, for the frequencies stated, the interference range defined in No. 27/24B between an interfering aeronautical station and an aircraft station operating at the limit of its service range. Because of the variability of propagation conditions not only from hour to hour within the daytime and night time periods but also from day to day, with season, with solar activity level and geographic location, the 15 dB protection ratio may be expected to have marked variations and accordingly a greater protection may be available much of the time, especially when the aircraft is not operating at the limit of its service range.
- 27/24F**      1.6 Supplementary information on service range, interference range and repetition distance, as well as on the use of the transparencies can be found in the technical documentation issued by the IFRB, such as texts of the IFRB Seminar on frequency management and use of the frequency spectrum; Doc. No. 11/76 or revisions thereof.
- 27/25**      1.7 Two types of transparencies are provided for use respectively with the Mercator projection world maps and the Lambert azimuthal equal area projection maps for the polar areas. The Mercator projection transparencies encompass the area between latitude 60° North and 60° South. The transparencies associated with the Polar area projections encompass the areas north of latitude 30° North and south of latitude 30° South. The Mercator projection overlaps the Polar projection maps between latitudes 30° and 60° North and 30° and 60° South. This overlap is intended to provide continuity between transparencies of the two projections.

## 2. *Type of maps used*

- 27/26**      The transparencies mentioned in Nos. 27/24E and 27/25, can be used only on a world or polar map of the projection and scales given on each transparency and will not be suitable for use on any other projection or scale. The world and polar maps associated with this Appendix, depicting MWARA, RDARA and VOLMET areas, are to the correct scale so that the transparencies carrying the interference range contours can be directly used on these maps. The auroral zones are marked on the polar maps.

## 3. *Change of Scale of Projection*

- 27/27**      3.1 Should any other scale or projection be desired, then new interference range contours can be drawn to fit the new scales or projections, by using the co-ordinates given in the tables shown below.
- 27/28**      3.2 When new transparencies are constructed, the intersection of the vertical line of symmetry, i.e., the meridian of longitude and the horizontal line of latitude should be at 00° latitude for the 00° contour, 20°N for the 20° contour, 40°N for 40° contour, etc.
- 27/29**      3.3 The co-ordinates shown in the tables under Nos. 27/39-27/48 are given with reference to the 180° meridian taken as the axis of symmetry for the construction of the contours.

4. *Sharing conditions between areas*

4.1 *Frequency bands 3 MHz to 11.3 MHz*

- 27/30 4.1.1 The transparencies are constructed on the basis of the following sharing conditions:

Areas	Bands between: (MHz)	Sharing conditions
MWARA or VOLMET area to MWARA or VOLMET area	3 and 6.6 9 and 11.3	night propagation day propagation  <i>Note: 6.6 MHz and 5.6 MHz sharing conditions are considered to be the same</i>
MWARA or VOLMET area to RDARA	3 and 5.6 6.6 and 11.3	night propagation day propagation
RDARA to RDARA	3 and 4.7 5.6 and 11.3	night propagation day propagation

- 27/31 4.1.2 The additional "Day" contours included for 3 MHz, 3.5 MHz and 4.7 MHz are for determining daylight sharing possibilities.

4.2 *Frequency bands between 13 MHz and 22 MHz*

- 27/31A 4.2.1 The revised Frequency Allotment Plan for the 13 MHz, 18 MHz and 22 MHz bands is based on daytime protection only. This results in the following sharing possibilities:
- 27/31B 4.2.2 for the 13 MHz band, the repetition factor is at least 3 whilst for the 18 MHz and 22 MHz bands it is 4. It is to be noted that the longitudinal separation might be decreased to allow for a repetition of 4 (at 13 MHz) and 6 (at 18 MHz and 22 MHz), taking into account operational and local circumstances;
- 27/31C 4.2.3 the sharing takes into account the likely locations of the aeronautical stations rather than the area boundaries.

5. *Method of use of the transparencies for the bands 3 MHz to 11.3 MHz*

- 27/32 5.1 Take the appropriate MWARA, RDARA or VOLMET area map associated with this Appendix and select the transparency for the frequency order and sharing conditions under consideration.

- 27/33        5.2 The equal area projections (Lambert) are applicable in the polar areas north of 60°N and south of 60°S; and the Mercator projections are applicable between 60°N and 60°S.
- 27/34        5.3 Place the centre of the transparency (i.e. the intersection of the axis of symmetry and the latitude line) over the boundary of the area (use the reception area boundary in the case of VOLMET) at the point on the boundary nearest to the potentially interfering transmitter or at the location of the interfering transmitter. Note the latitude of the selected point and use the interference range contour corresponding to this latitude.
- 27/35        5.4 A transmitter located at any point outside the contour will result, as defined in No. 27/24B, in a protection ratio of better than 15 dB.
- 27/36        5.5 A transmitter located at any point inside the contour will result in a protection ratio of less than 15 dB. However, if the transmitter is located inside the contour but the propagation path traverses an auroral zone, it is assumed that the signal attenuation within this zone will result in a protection ratio of better than 15 dB.
- 27/37        5.6 For the Northern Hemisphere the Mercator projection transparencies should be used in their natural position as published, but for the Southern Hemisphere the transparencies should be inverted. This point should be carefully observed when following the boundaries of areas which involve the transition of the equator.
- 27/38        SUP

### C. Classes of emission and power

#### 1. Classes of emission

**27/49** In the aeronautical mobile (R) service the use of emissions such as those listed below is permissible subject to compliance with the special provisions applicable to each case and provided that such use does not cause harmful interference to other users of the channel concerned.

**27/50** 1.1 *Telephony – Amplitude modulation:*

- double sideband A3 \*
- single sideband, full carrier A3H \*
- single sideband, suppressed carrier A3J

\* A3 and A3H to be used only on 3 023 kHz and 5 680 kHz as well as in cases covered by Resolution N° Aer2 – 3, resolves 5.

1.2 *Telex (including automatic data transmission)*

**27/51** 1.2.1 *Amplitude modulation:*

- telegraphy without the use of a modulating audio frequency (by on-off keying) A1 \*\*
- telegraphy by the on-off keying of an amplitude modulating audio frequency or audio frequencies or by the on-off keying of the modulated emission and including selective calling, single sideband, full carrier A2H
- multichannel voice frequency telegraphy, single sideband, suppressed carrier A7J
- other transmissions such as automatic data transmission, single sideband, suppressed carrier A9J

**27/52** 1.2.2 *Frequency modulation:*

- telegraphy by frequency shift keying without the use of a modulating audio frequency, one of two frequencies being emitted at any instant F1 \*\*

\*\* A1 and F1 are permitted provided they do not cause harmful interference to the classes of emission A2H, A3J, A7J and A9J. In addition, A1 and F1 emissions shall be in accordance with the provisions in Nos. 27/65 to 27/66C and care should be taken to place these emissions at or near the centre of the channel. However, a modulating audio frequency is permitted with single sideband transmitters, where the carrier is suppressed in accordance with No. 27/63.

2. *Power*

- 27/54** 2.1 Unless otherwise specified in Part II of this Appendix, the peak envelope powers supplied to the antenna transmission line shall not exceed the maximum values indicated in the table below; the corresponding peak effective radiated powers being assumed to be equal to two-thirds of these values:

Class of emission	Stations	Maximum peak envelope power
A2H, A3J, A7J, A9J A3*, A3H* (100 % modulation)	Aeronautical stations Aircraft stations	6 kW 400 W
Other emissions such as A1, F1	Aeronautical stations Aircraft stations	1.5 kW 100 W

\* A3 and A3H to be used only on 3 023 kHz, and 5 680 kHz, as well as in cases covered by Resolution No. Aer2-3, resolves 5.

- 27/55** 2.2 It is assumed that the maximum peak envelope powers specified above for aeronautical stations will produce the mean effective radiated power of 1 kW used as a basis for the interference range contours.

- 27/56** 2.3 In order to provide satisfactory communication with aircraft, aeronautical stations serving MWARA, VOLMET and world-wide allotment areas may exceed the power limits specified in No. 27/54, except in the case of 3 023 kHz and 5 680 kHz which are subject to the special provisions of Nos. 27/208 to 27/214. In each such case, the administration having jurisdiction over the aeronautical station shall note No. 694 of the Radio Regulations and ensure:

**27/57** a) that when there is any possibility of harmful interference co-ordination is effected with the administrations concerned;

**27/58** b) that harmful interference is not caused to stations using frequencies in accordance with the applicable provisions of the Allotment Plan;

**27/59** c) that in other MWARAs, RDARAs or VOLMET areas allotted the same frequencies, the specified protection ratios within the boundaries of those areas shall be maintained;

**27/60** d) that the directional characteristics of the antenna are such as to minimize radiation in unnecessary directions, particularly towards other MWARAs, RDARAs or VOLMET areas which have been allotted the same frequencies;

**27/61** e) that, in accordance with the Radio Regulations, all details of the assignment(s), including the transmitting antenna characteristics shall be notified to the I.F.R.B.

- 27/62** 2.4 It is recognized that the power employed by aircraft transmitters may, in practice, exceed the limits specified in No. 27/54. However, the use of such increased power (which normally should not exceed 600 W  $P_p$ ) shall not cause harmful interference to stations using frequencies in accordance with the technical principles on which the Allotment Plan is based.

#### D. Limits to the power levels of unwanted emissions

##### 1. *Technical provisions relating to the use of single-sideband emissions*

- 27/63** 1.1 *Definitions of carrier modes:*

Carrier mode	Level $N$ (dB) of the carrier with respect to peak envelope power
Full carrier (for example A2H)	$0 \geq N \geq -6$
Suppressed carrier (for example A3J)	Aircraft stations $N < -26$ Aeronautical stations $N < -40$

- 27/64** SUP

##### 2. *Tolerance for levels of emission outside the necessary bandwidth*

- 27/65** 2.1 In a single-sideband transmission, the mean power of any emission supplied to the antenna transmission line of an aeronautical or aircraft station on any discrete frequency, shall be less than the mean power ( $P_m$ ) of the transmitter in accordance with the table in No. 27/66.
- 27/66** 2.2 For aircraft station transmitter types and for aeronautical station transmitters first installed before 1 February 1983 :

Frequency separation $\Delta$ from the assigned frequency kHz	Minimum attenuation below mean power ( $P_m$ ) dB
$2 \leq \Delta < 6$	25
$6 \leq \Delta < 10$	35
$10 \leq \Delta$	Aircraft stations: 40 Aeronautical stations: $43 + 10 \log_{10} (P_m)$ (watts)

- 27/66A** *Note:* All transmitters first placed in operation after 1 February 1983 shall comply with the specifications contained in No. 27/66C.

- 27/66B**      2.3 In a single-sideband transmission, the peak envelope power ( $P_p$ ) of any emission supplied to the antenna transmission line of an aeronautical or aircraft station on any discrete frequency, shall be less than the peak envelope power ( $P_p$ ) of the transmitter in accordance with the table in No. 27/66C.
- 27/66C**      2.4 For aircraft station transmitters first installed after 1 February 1983 and for aeronautical station transmitters in use after 1 February 1983:

Frequency separation $\Delta$ from the assigned frequency kHz	Minimum attenuation below peak envelope power ( $P_p$ ) dB
1.5 $\leq \Delta < 4.5$	30
4.5 $\leq \Delta < 7.5$	38
7.5 $\leq \Delta$	Aircraft stations: 43 Aeronautical stations * {

\* For transmitter power up to and including 50 watts:  $43 + 10 \log_{10} P_p$  (watts). For transmitter powers more than 50 watts, the attenuation shall be at least 60 dB.

**27/67**      to      } SUP  
**27/71**      }

#### E. Other technical provisions

##### 1. Assigned frequencies

- 27/72**      1.1 For single-sideband emissions, except the class of emission A2H, the assigned frequency shall be at a value 1400 Hz above the carrier (reference) frequency.
- 27/72A**      1.2 For aeronautical stations equipped with selective calling systems, the class of emission A2H shall be indicated in the Supplementary Information column of the form of notice (see Appendix 1 to the Radio Regulations).
- 27/72B**      1.3 For classes of emission A1 and F1 the assigned frequency shall be chosen in accordance with the provisions of the footnote to Nos. 27/51 and 27/52.

**Frequency Allotment Plan  
(in numerical order of frequencies)**

*General Notes:*

**27/192** 1. *Class of stations:* FA

*Classes of emission:* see Nos. 27/49-27/52.

*Power:* Unless otherwise indicated in the Plan, the power values for aeronautical and aircraft stations are those shown in Nos. 27/54-27/62.

*Hours:* H24, unless otherwise indicated.

**27/193** 2. A frequency allotted on a "day-time basis" may be used during the period one hour after sunrise to one hour before sunset.

**27/194** 3. A "common channel" is a channel allotted in common to two or more areas within interference distance of each other and its use is subject to agreement between the administrations concerned.

**27/194A** 4. The world-wide frequency allotments appearing in the tables at No. 27/189 and Nos. 27/195 to 27/207A, except for carrier (reference) frequencies 3 023 kHz and 5 680 kHz, are reserved for assignment by administrations to stations operating under authority granted by the administration concerned, for the purpose of serving one or more aircraft operating agencies. Such assignments are to provide communications between an appropriate aeronautical station and an aircraft station anywhere in the world for exercising control over regularity of flight and for safety of aircraft. World-wide frequencies are not to be assigned by administrations for MWARA, RDARA and VOLMET purposes. Where the operational area of an aircraft lies wholly within a RDARA or Sub-RDARA boundary, frequencies allotted to those RDARAs and Sub-RDARAs shall be used.

## ARTICLE 3

### **Frequencies for Common Use**

- 27/208** 1. The carrier (reference) frequencies 3 023 kHz and 5 680 kHz are intended for common use on a world-wide basis.
- 27/209** 2. The use of these frequencies in any part of the world is authorized:
- 2.1 aboard aircraft for:
    - a) communications with approach and aerodrome control;
    - b) communication with an aeronautical station when other frequencies of the station are either unavailable or unknown;
  - 2.2 at aeronautical stations for aerodrome and approach control under the following conditions:
    - a) with mean power limited to a value of not more than 20 watts in the antenna circuit;
    - b) special attention must be given in each case to the type of antenna used in order to avoid harmful interference;
    - c) the power of aeronautical stations which use these frequencies in accordance with the above conditions may be increased to the extent necessary to meet certain operational requirements subject to coordination between the administrations directly concerned and those whose services may be adversely affected.
- 27/210** 3. Notwithstanding these provisions, the frequency 5 680 kHz may also be used at aeronautical stations for communication with aircraft stations when other frequencies of the aeronautical stations are either unavailable or unknown. However, this use shall be restricted to such areas and conditions that harmful interference cannot be caused to other authorized operations of stations in the aeronautical mobile service.
- 27/211** 4. Additional particulars regarding the use of these channels for the above purposes may be recommended by the meetings of ICAO.
- 27/212** 5. Frequencies 3 023 kHz and 5 680 kHz may also be used by stations of other mobile services participating in coordinated air-surface search and rescue operations, including communications between these stations and participating land stations. Aeronautical stations are authorized to use these frequencies to establish communications with such stations.
- 27/213** 6. These channels may be used for A1 or A3 emissions, in accordance with special arrangements. Such channels shall not be subdivided.
- 27/214** 7. All stations participating directly in coordinated search and rescue operations and using frequencies 3 023 kHz and 5 680 kHz shall transmit solely on the upper sideband except in the cases provided for in No. 27/50.
