TITLE: Launch of the 2014 Manual for Measuring ICT Access and Use by Households and
Individuals

Committed to Connecting the World Helping the world communicate

11th World Telecommunication/ICT Indicators Symposium (WTIS) *Mexico City, 4-6 December 2013*

Launch of the *2014 Manual for Measuring ICT Access and Use by Households and Individuals*

Susan Teltscher
Head, ICT Data and Statistics Division
International Telecommunication Union

Committed to Connecting the World

2009 and 2014 editions: 5 years is a long time in the ICT age

Why revised Manual?

- Changes in technologies, devices, use of ICTs; emergence of smartphones and tablets
 - **Revisions of the Partnership core ICT household indicators**
- Feedback from NSOs and other users of the ITU *Manual* and the Partnership core ICT indicators publication
 - Inputs received during delivery of training courses and from EGH members
- Revisions made in the indicators included in the ITU *Handbook for the collection of administrative data on telecommunication/ ICT (2011)*

3

Main purpose of the Manual

- To assist countries to measure ICT access and use by households and individuals
- To ensure the production of high quality and internationally comparable data
- For the collection of ICT statistics through household surveys (standalone ICT surveys or ICT questions or modules added to existing surveys) or censuses
- Target audience: Official ICT data producers, statisticians, National Statistical Offices

4

Revision process

- 2012-13: two rounds of complete revisions (consultants)
- Comments from EGH forum
- Outcomes of EGH meeting (June 2013, Brazil)
- Last round of revisions (consultant)
- **Launch at WTIS 2013 (5 December 2013, Mexico)**

What is new in the 2014 edition?

- Complete **revision of core indicators** and change in the presentation of the indicators
- **Updated definitions, classifications** and examples
- Creation of **tables for each core indicator** and complementary information such as:
 - definitions of technical terms; clarifications and methodological issues; model questions; disaggregation and classifications; core indicator calculation; and policy relevance.
- Expansion on **conceptual framework** and **international work** carried out on ICT measurement

What is new in the 2014 edition?

- More emphasis on **national coordination of ICT statistics** (new Chapter 2)
- More emphasis on collection of ICT statistics through **existing household surveys** (rather than stand-alone ICT surveys)
- Revision and updates to better reflect **data collection practices**
- Revisions in the areas of **survey methodology, sampling design**, data collection standards specific to the core indicators

Content – 10 Chapters

1. Introduction
2. Coordination among national stakeholders in ICT measurement
3. Planning and preparation for ICT household surveys
4. Statistical standards (core ICT household indicators)
5. Data sources and collection techniques
6. Question and questionnaire design
7. Sampling

Content – 10 Chapters

8. Data processing
 9. Data quality and evaluation
 10. Dissemination of ICT household data and metadata
- Annexes
 - Core list of ICT indicators
 - Model questionnaire
 - Examples of imputation and weighting
 - ITU Questionnaire
 - Glossary

How to get it?

- USB key will be disseminated tomorrow (final draft)
- Final version:
 - ITU Statistics website
 - Printed copies will be sent to all NSOs in early 2014
 - 6 languages available during first quarter of 2014

Committed to Connecting the World

Thank you

TITLE: Data quality assessment framework for ICT Statistics

Committed to Connecting the World
Helping the world communicate

11th World Telecommunication/ICT Indicators Symposium 4-6 December 2013 Mexico City

Data quality assessment framework for ICT Statistics

Esperanza Magpantay
Senior Statistician
ICT Data and Statistics Division
BDT/ ITU

Committed to Connecting the World

Background

- Mandate to collect telecommunication/ICT statistics
- Data are collected regularly using online questionnaires
- Telecom access indicators (subscriptions); ICT households statistics
- Collected from regulators/ministries; national statistics offices
- Annual data referring to previous year
- Validation of the data is included in the online questionnaires
- Micro/Macro edits performed
- Tracking and metadata of data points included in the database
- Verification with data providers
- Notes explaining deviations

WTIS, 4-6 December 2013, Mexico City

2

Methodology

■ Manuals

- ITU Manual on ICT Household Statistics
- ITU Handbook of Telecommunication/ICT Indicators

■ Expert Groups

- Expert Group on Telecommunication/ICT indicators
- Expert Group on ICT Household statistics

Dissemination

■ WTI database

- 2 updates per year
- Latest release: December 2013

■ Online

- ICT Eye
- ITU Statistics website

■ Requests from data users

■ Analytical reports

- Measuring the Information Society 2013

■ Yearbook of Statistics

- Latest release: December 2013

But is this enough?

- Are the indicators we produce relevant and timely?
- Are they made available to whoever needs them?
- Are they documented enough to be understood by data users?

Data quality assessment framework is important

Because:

- Estimations and imputations of missing data
- Different country sources
- Diversity in scope (telecom market and population)
- Important both at national and international level

Future

- Data quality assessment framework for ICT statistics (national and international)
- Implementing the assessment framework
 - Documenting processes
- Addressing issues found during assessment

Thank you!

TITLE: National Quality Assurance Frameworks

National Quality Assurance Frameworks

Ralf Becker
United Nations Statistics Division
Dec. 2013

OUTLINE

- Quality and Dimensions of Quality
- Quality Assurance
- NQAF
- Available tools

What is QUALITY?

United Nations Statistics Division

- A rather vague concept, has different meanings depending upon the context
- In the NSO context, QUALITY is defined as **FITNESS FOR USE**, in terms of user needs
 - how well do the agencies' products meet user needs?
 - are they "fit for use" or fit for the purpose for which they are to be used?
- The NSO's product is the INFORMATION it disseminates (facts to be used for decision-making by governments, businesses, institutions, the public)
 - the focus here is on Information Quality.

3

What is QUALITY?

United Nations Statistics Division

FITNESS FOR USE

This definition is broader than in the past when quality was equated with **accuracy !**

Now it is recognized that there are other important dimensions.

Can data be said to be of good quality when:

- ACCURATE – but produced too late to be used?
- ACCURATE – but can't be found, accessed, or totally understood?
- ACCURATE – but conflict with other data?
- ACCURATE – but from unknown or unverifiable sources?
- ACCURATE – but not provided on a regular basis?
- ACCURATE – but not really shows what is needed?

Thus QUALITY needs to be looked at as a multi-faceted, multi-dimensional concept

Some models/frameworks existed already that addressed these concerns

4

Intermission:

A (very) short history of the
National Quality Assurance
Frameworks (NQAF)

5

Expert Group

- UN Statistical Commission 2010
 - QUALITY - was the programme review (discussed for the first time)
- Report concludes there can be no single “generic” national quality assurance framework
- Instead, a template for a generic NQAF was proposed (recognizing that a one-size-fits-all framework was not feasible)
- Statistical Commission supported the establishment of an expert group to develop this

6

Expert Group

- Starting point – 3 proposals for generic template (DQAF, StatCan, CoP)
 - Agreed to develop a 4th variation of these proposals
- EG's NQAF template basically incorporates all of the elements of the DQAF, the CoP and Statistics Canada's framework

Important:

- Work was driven by countries for application at the national level

7

Expert Group

First outputs of the EG's work:

- NQAF template
- A "Guideline document" (90+ pages)
 - Check list
- Mapping of the NQAF to other frameworks
- Glossary
- Online inventory of national and int'l quality-related references

All are available on our Website

8

Dimensions of quality

9

QUALITY DIMENSIONS (COMPONENTS)

Dimensions or components to be considered when assessing the quality of data outputs (i.e. product quality), according to the NQAF:

- 1. Relevance (covered in NQAF14)
- 2. Accuracy and reliability (covered in NQAF15)
- 3. Timeliness and punctuality (covered in NQAF16)
- 4. Accessibility and clarity (covered in NQAF17)
- 5. Coherence and comparability (covered in NQAF18)

10

United Nations Statistics Division

Quality is not just about outputs

- To have high quality outputs we need to consider:
 - inputs and processes
 - we need to consider the quality of these as well
 - quality of the organization responsible for the processes (institutional environment)
 - quality of the NSS

11

United Nations Statistics Division

Quality assurance

A system of coordinated methods and tools to ensure a sustainable level of quality of outputs and processes where:

- products/outputs: their quality requirements are explicitly documented
- processes: are defined and made known to all staff and their correct implementation is monitored
- users: are informed about product quality and possible limitations
- improvement measures: procedures are in place to guarantee that the necessary steps are planned, implemented and evaluated

12

Quality assurance frameworks

Objective - have in place an overarching framework or structure that will:

- provide context for quality concerns, activities and initiatives
- explain the relationships between the various quality procedures and tools

- Serves as “umbrella” to record, reference and organize the full range of quality concepts, policies, tools and practices

- Forward looking – addresses improvements
 - Not simply an assessment

13

United Nations Statistics Division

What is included in NQAF ?

14

NQAF

- 1. Quality context
- 2. Quality concepts and frameworks
- 3. Quality assurance guidelines
 - 3a. Managing the statistical system
 - 3b. Managing the institutional environment
 - 3c. Managing statistical processes
 - 3d. Managing statistical outputs
- 4. Quality assessment and reporting
- 5. Quality and other management frameworks

15

NQAF

- Provides detailed criteria for each of these areas
 - 19 NQAF lines, 200+ elements, 100+ mechanisms
- Can be customized to particular use
 - Country-specific
 - Targeted at specific statistical programmes
 - Allows for necessary detail to be added
- This is still a **template**
 - Countries/NSOs will build their own framework based on this

16

What kind of tools are available?

17

NQAF template

1. Quality context

- 1a. Circumstances and key issues driving the need for quality management
- 1b. Benefits and challenges
- 1c. Relationship to other statistical agency policies, strategies and frameworks and evolution over time

[Back](#)

2. Quality concepts and frameworks

- 2a. Concepts and terminology
- 2b. Mapping to existing frameworks

3. Quality assurance guidelines

3a. Managing the statistical system

- [NQAF 1] Coordinating international statistical system
- [NQAF 2] Managing relationships with data users and data providers
- [NQAF 3] Managing statistical standards

3b. Managing the institutional environment

- [NQAF 4] Assuring professional independence
- [NQAF 5] Assuring impartiality and objectivity
- [NQAF 6] Assuring transparency
- [NQAF 7] Assuring statistical confidentiality and security
- [NQAF 8] Assuring the quality commitment
- [NQAF 9] Assuring adequacy of resources

3c. Managing statistical processes

- [NQAF 10] Assuring methodological soundness
- [NQAF 11] Assuring cost-effectiveness
- [NQAF 12] Assuring soundness of implementation
- [NQAF 13] Managing the respondent burden

3d. Managing statistical outputs

- [NQAF 14] Assuring relevance
- [NQAF 15] Assuring accuracy and reliability
- [NQAF 16] Assuring timeliness and punctuality
- [NQAF 17] Assuring accessibility and clarity
- [NQAF 18] Assuring coherence and comparability
- [NQAF 19] Managing metadata

4. Quality assessment and reporting

- 4a. Measuring product and process quality - use of quality indicators, quality targets and process variables and descriptions
- 4b. Communicating about quality - quality reports
- 4c. Obtaining feedback from users
- 4d. Conducting assessments, labelling and certification
- 4e. Assuring continuous quality improvement

5. Quality and other management frameworks

- 5a. Performance management
- 5b. Resource management
- 5c. Ethical standards
- 5d. Continuous improvement
- 5e. Governance

Accessibility

Definition: The ease and conditions under which statistical information can be obtained.

Context: Accessibility refers to the availability of statistical information to the user. It includes the ease with which the existence of information can be ascertained, as well as the suitability of the form or medium through which the information can be accessed. The cost of the information may also be an aspect of accessibility for some users.

Accessibility refers to the physical conditions in which users can obtain data: where to go, how to order, delivery time, clear pricing policy, convenient marketing conditions (copyright, etc.), availability of micro or macro data, various formats (paper, files, CD-ROM, Internet), etc.

Source: SDMX (2009)

Hyperlinks: <http://www.sdmx.org/>

Accuracy

Definition: Closeness of computations or estimates to the exact or true values that the statistics were intended to measure.

Context: The accuracy of statistical information is the degree to which the information correctly describes the phenomena. It is usually characterized in terms of error in statistical estimates and is often decomposed into bias (systematic error) and variance (random error) components. Accuracy can contain either measures of accuracy (numerical results of the methods for assessing the accuracy of data) or qualitative assessment indicators. It may also be described in terms of the major sources of error that potentially cause inaccuracy (e.g., coverage, sampling, non response, response error). Accuracy is associated with the "reliability" of the data, which is defined as the closeness of the initial estimated value to the subsequent estimated value.

This concept can be broken down into: Accuracy - overall (summary assessment); Accuracy - non-sampling error; Accuracy - sampling error.

25

Terminology: Glossary compiled by the EC

United Nations Statistics Division

The way forward...

26

The way forward

United Nations Statistics Division

- Data quality is part of discussions at the international level
 - Coordination among agencies (UNSC, CCSA)
 - Harmonization of quality frameworks
 - Assistance to countries in their implementation is next
- NQAF provides a template
 - Tailoring it to ICT needs is possible and desirable
 - Detailed, quantifiable indicators can help with monitoring and improving quality over time

TITLE: Data Quality Assessment Framework

Data Quality Assessment Framework

World Telecommunication/ICT Indicators Symposium

Mexico City, Mexico
December 4-6, 2013

The views expressed herein are those of the author and should not be attributed to the IMF, its Executive Board, or its management

1

Statistics Department

Outline

- ❖ Background
 - ❖ Data Transparency and Metadata
 - ❖ SDDS/GDDS
- ❖ Broader view of Quality
- ❖ DQAF Architecture
- ❖ Prerequisites of Quality and Dimensions
- ❖ Conclusions
 - ❖ Applications of DQAF within the Fund
 - ❖ Other Applications
 - ❖ Importance of applying a DQAF

2

Data Transparency and Metadata

- ❖ The Special Data Dissemination Standard (SDDS) was established in 1996 to guide members in **providing** economic and financial data to the public.
 - ❖ Data dissemination standard that identifies best practices in the *dissemination* of economic and financial data.
 - ❖ For countries having, or seeking, access to international capital markets
- ❖ The General Data Dissemination System (GDDS), established in 1997 provides a framework for participating countries to **develop a strategy** for strengthening their statistical systems.
 - ❖ The GDDS fosters:
 - ❖ The application of sound methodology
 - ❖ The adoption of good compilation and dissemination practices
 - ❖ The observance of procedures ensuring professionalism

3

Data Transparency and Metadata

- ❖ A **standard** (SDDS) is precise
 - ❖ Specific requirements for coverage, periodicity, and timelines of data
- ❖ A **system** (GDDS) is less prescriptive
 - ❖ Emphasis on improvement over time and progress toward higher quality, increased periodicity, and more timely data
- ❖ How about **quality** considerations?

4

What is Quality?

- ❖ **Accuracy** is generally the first-mentioned data quality criterion; that is to what extent data portray reality.
- ❖ But, what about...
 - ❖ Timeliness
 - ❖ Periodicity
 - ❖ Consistency
 - ❖

5

Broader view of Quality

- ❖ Broader view of quality looks at:
 - ❖ The statistical institutions
 - ❖ Statistical processes
 - ❖ Statistical output

6

DQAF Architecture

- ❖ The DQAF is organized around a set of prerequisites and five dimensions of data quality
 - ❖ assurances of integrity,
 - ❖ methodological soundness,
 - ❖ accuracy and reliability,
 - ❖ serviceability, and
 - ❖ accessibility.
- ❖ The DQAF identifies a non-exhaustive list of “**good practices**” in the compilation and dissemination of macroeconomic statistics products.

7

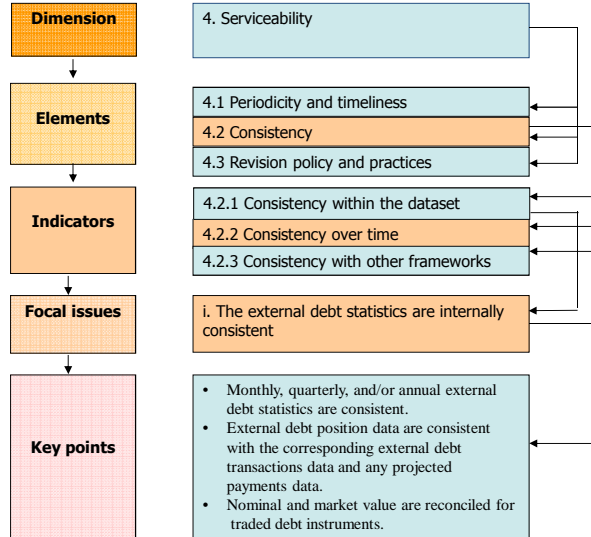

A Cascading Structure

- ❖ **Five dimensions** of quality
 - and for each dimension,
 - ❖ **Elements** (that can be used in assessing quality)
 - and for each element,
 - ❖ **Indicators** (that are more concrete and detailed)
 - and for each indicator,
 - ❖ **Focal issues** (that are tailored to the dataset)
 - and for each focal issues
 - * **Key points** (to be considered for the assessment)

Note: The first three levels are applicable to any dataset; the next two are dataset specific.

8

DQAF Cascading Structure: An example

9

DQAF—Prerequisites of Quality

| | Description |
|--------------------------|---|
| Prerequisites of quality | <p>This category identifies conditions within the agency in charge of producing statistics that have an impact on data quality (legal and institutional environment, available resources, relevance, and quality awareness).</p> <ul style="list-style-type: none"> □ The primary responsibility for collecting, processing, and disseminating macroeconomic statistics is clearly specified. □ Confidentiality of individual reporters' data is guaranteed. □ A law or other formal provision provides for the reporting of information needed to compile macroeconomic statistics. □ Staff / computing resources / physical facilities / funding for compiling macroeconomic statistics are adequate to performed required tasks. |

10

DQAF—Dimension 1

| | Description |
|---|---|
| Assurances of integrity | It identifies features that support firm adherence to objectivity in the collection, processing, and dissemination of statistics so as to maintain users' confidence. Elements refer to professionalism, transparency, ethical standards. |
| <input type="checkbox"/> Recruitment and promotion are based on relevant aptitude and/or expertise.
<input type="checkbox"/> Choices of data sources and statistical techniques are based solely by statistical considerations.
<input type="checkbox"/> Terms and conditions under which statistics are collected, processed, and disseminated are available to the public.
<input type="checkbox"/> Clear set of ethical standards are available and staff are made aware. | |

11

DQAF—Dimension 2

| | Description |
|---|--|
| Methodological soundness | It refers to the application of international standards, guidelines, and accepted practices. Application of such standards, which are specific to each dataset, is indicative of the soundness of the data and fosters international comparability. Elements refer to the basic building blocks of concepts and definitions, scope, classification and sectorization, and basis for recording. |
| <input type="checkbox"/> Concepts and definitions / scope / classification and sectorization/ basis for recording used to compile macroeconomic statistics are in broad conformity with internationally accepted methodologies. | |

12

DQAF—Dimension 3

| | Description |
|--------------------------|--|
| Accuracy and reliability | <p>It identifies features that contribute to the goal that data portray reality. Elements refer to features of the source data, statistical techniques, and data validation.</p> <ul style="list-style-type: none"> <input type="checkbox"/> The data collection programs employed to compile macroeconomic statistics are adequate. <input type="checkbox"/> Source data are consistent with the definitions, scope, classifications, and time of recording adopted by the data producing agency. <input type="checkbox"/> Statistical techniques employed conform to sound statistical procedures. <input type="checkbox"/> Appropriate measures are taken to adjust source data. <input type="checkbox"/> Bilateral comparisons/ reconciliations are conducted with data of other countries and international organizations. |

13

DQAF—Dimension 4

| | Description |
|----------------|--|
| Serviceability | <p>It focuses on practical aspects of how well a data set meets user's need. Elements refer to the extent to which data are disseminated with an appropriate periodicity and timeliness, are consistent internally and with other datasets, and follow a known revision policy.</p> <ul style="list-style-type: none"> <input type="checkbox"/> Periodicity and timeliness follows dissemination standards (Fund's SDDS / GDDS). <input type="checkbox"/> Statistics are consistent over time <input type="checkbox"/> Macroeconomic statistics are consistent / reconcilable among national accounts, balance of payments, IIP, monetary and financial, and government finance statistics. <input type="checkbox"/> Revisions follow a regular an transparent schedule. |

14

DQAF—Dimension 5

| | Description |
|---------------|---|
| Accessibility | <p>It deals with the need for data and metadata to be presented in a clear manner, are easily available, that metadata are up-to-date and pertinent, and that knowledgeable support service is available to users.</p> <ul style="list-style-type: none"> <input type="checkbox"/> Supplementary statistical sets encouraged by the SDDS/GDDS are provided to users. <input type="checkbox"/> Statistics are released on the preannounced schedule. <input type="checkbox"/> Statistics are made available to all users at the same time. <input type="checkbox"/> Metadata give adequate information about the meaning of the data and about the methodology used to collect and process them. <input type="checkbox"/> Prompt and knowledgeable support service to users of macroeconomic statistics is available. |

15

Ratings^{1/}

| | |
|-----|----------------------|
| O | Fully observed |
| LO | Largely observed |
| LNO | Largely non-observed |
| NO | Non-observed |

1/ Ratings used in data ROSC missions.

16

Applications of DQAF Within the Fund

- ❖ Data ROSC (Reports on the Observance of Standards and codes).
- ❖ Technical assistance and training.
- ❖ Reviews performed in the context of IMF country work.
- ❖ IMF data dissemination standards.

17

Other Applications

- ❖ The DQAFs could be useful tools for:
 - ❖ other international agencies
 - ❖ national agencies (Generic DQAF)
 - ❖ financial market participants
- ❖ How might you use it?
 - ❖ For assessing institutional arrangements for data compilation and dissemination.
 - ❖ Opening eyes to “good practices” in the compilation or dissemination of macroeconomic statistics.

18

Importance of Applying a DQAF

- ❖ Self Assessment (not only NSOs)
- ❖ Suitable to develop specific frameworks
 - ❖ ICT statistics?
- ❖ Limitations if no QAF is applied
 - ❖ Potential of inconsistent data among providers of statistics
 - ❖ Inability to narrow down and operationalize the multidimensional concept of quality
 - ❖ through comprehensive coverage of the dimensions of quality

11th World Telecommunication/ICT Indicators Symposium (WTIS-13)

Mexico City, México, 4-6 December 2013

Contribution to WTIS-13

Document C/7-E
5 December 2013

TITLE: Module on Availability and Use of Information and Communication Technologies in Households

Module on Availability and Use of Information and Communication Technologies in Households

(MODUTIH by its acronym in Spanish)

December , 2013

Methodological issues

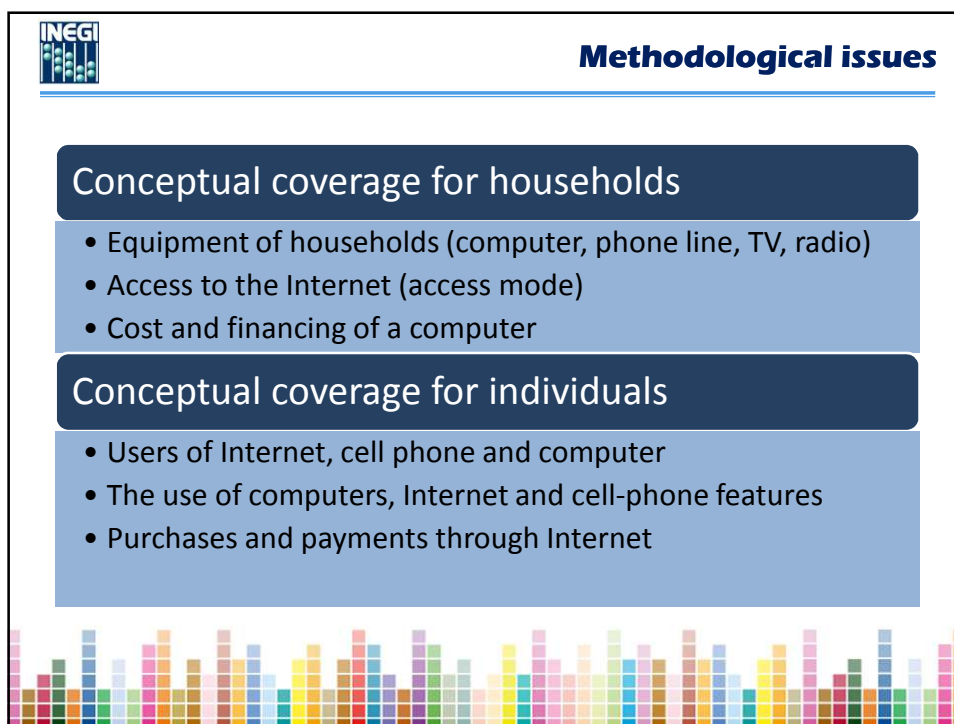

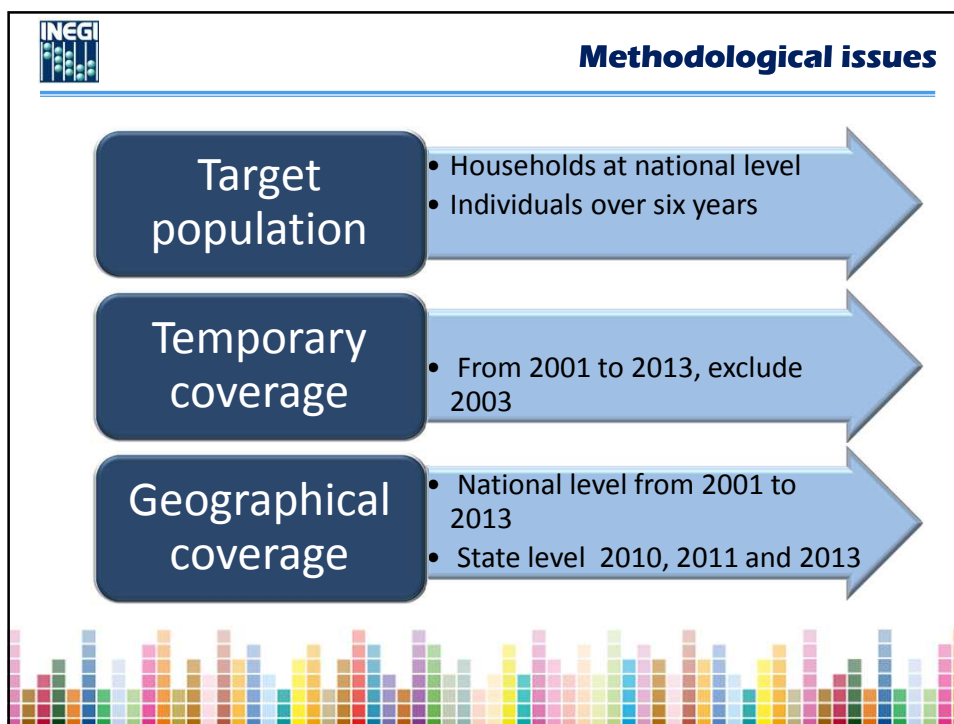

Objective: To get basic data about the availability of ICT in households, as well as its use by individuals, that allows to generate key indicators of access to ICT usage by individuals and households according to the best international outlined practices.

Date of the last survey

- April – May, 2013

Periodicity

- Annually base since 2001, with the exception of 2003.

Methodological issues

**SAMPLE
SCHEMA**

- Inherits the characteristics of the probabilistic survey household employment (ENOE): *two-step* method, stratified and cluster.
- Funded and jointly with the CSIC, it was possible to extend the coverage of the study to provide figures of State level for the 2010, 2011 and 2013 exercises.

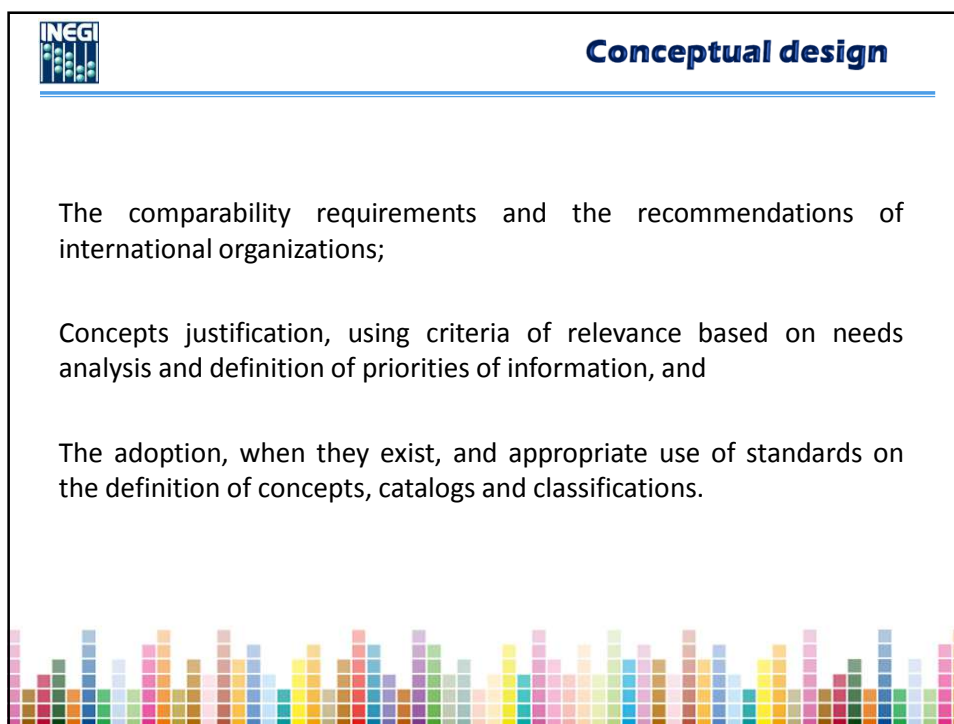

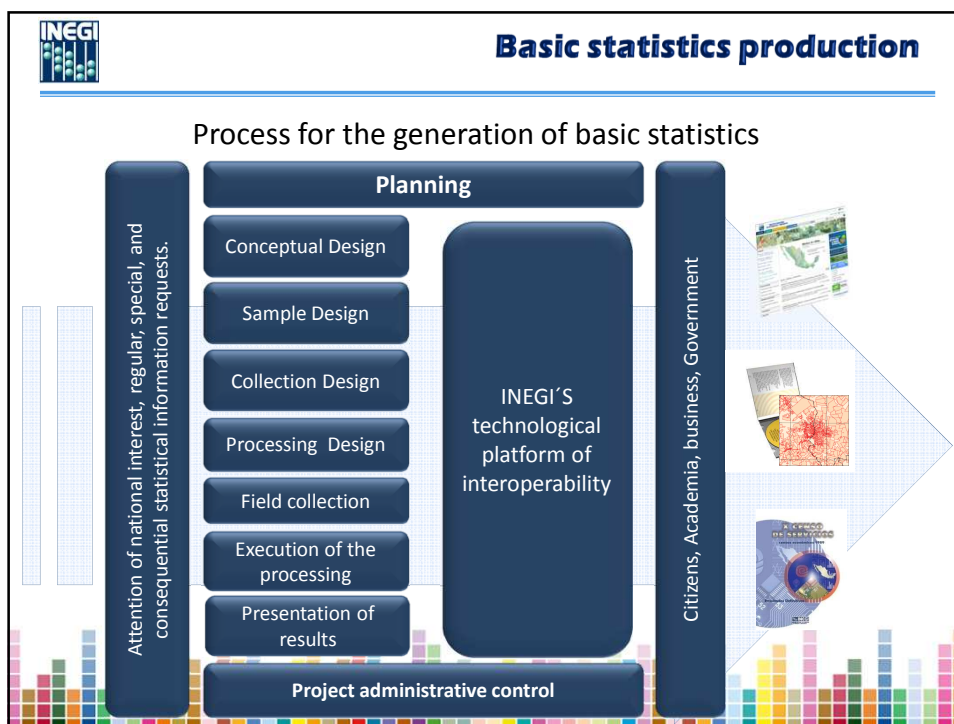

**STATISTICAL
ACCURACY**

- No more than 15% sampling error.
- Confidence level of 90%.
- Rate of non expected response of 15%.
- Sample size: 7,000 housing units for national representation.
- 38,426 housing for State representative.

MODUTIH quality data

Conceptual design

To ensure the quality of statistical measurements, during the "**conceptual design**" gets attention in:

- Identification of the objectives or purposes that guide the statistical project.
- Definition and justification of the concepts of interest aligned to the objectives.
- Questionnaire design, whereas reliable information.
- Conducting field tests to ensure the suitability of questionnaires designed.
- Design coding criteria, validation and presentation of results, considering the objectives and needs initially raised.

Statistical Design

The sampling frame is the infrastructure for sample selection of the survey. It consists of a set of housing listing and mapping associated with them for its location.

The MODUTIH sample is obtained from the sample that rises for the ENOE. This is because the MODUTIH is an annex module to the ENOE questionnaire. That is way, the statistical design of the MODUTIH is aimed at the measurement of the rate of open unemployment (TDA).

How do we care the quality process of the statistical design?

Ensuring a quality frame

- Delivering mapping and support elements to the interviewer.
- Taking care that the listings are exhaustive in coverage.
- Carrying out a continuous updating of listings of homes.
- With an automated operation.
- Supervision.
- Construction and monitoring of indicators.

Statistical Design / Ensuring Quality Design

Review process guide:

For calculating
the sample size

- Is the magnitude of the error suited to the indicators of interest?
- Was considered the effect of design?
- Is the average number of inhabitants per house of the study population scope?
- Do was chosen the correct rate of anticipated non-response?
- Is the total sample size the sum of the sample in the domains?

Statistical Design / Ensuring Quality Design

Review process guide:

Distribution

- Sample was allocated to all strata?
- In case of collapses, the collapsed stratum contains the sum of selection units strata?

Seleccction

- The sum of selected units per stratum, corresponding to the distribution?
- The total sum of units is fixed?
- In case of substitutions, there are all identified?
- The identification data of the selected units are complete?

Statistical Design / Ensuring Quality Design

Review process guide:

Calculation of expansion factors

- The sum of natural expansion factors, does the total units level stratum and total level?
- The sum of factors assigned to individuals or economic units, is consistent with the sum of population or employed personnel totals, respectively?
- Were reviewed and atypical adjusted factors were adjusted where appropriate?

Statistical accuracy calculation

- There are no inconsistencies in the allocation of strata to the PSU (Primary Sampling Units)?
- We checked the associations in the case of collapse of strata?
- Does the value of the indicator obtained by the calculation of precise details, match with the one obtained in the area of processing?
- Does the method of calculation to be used correspond to the design?

Training

- We establish a **training strategy** based on the number of people involved in the project, their profiles, or experiences and as the diversity of functions involving field work.
- Prior to the training instructors Central, regional, or State are prepared, according to the structure of the Institute.
- We produce educational materials such as manuals, didactic guides, books of exercises, presentations and checking activities.
- The courses are theoretical and practical in groups of maximum 30 participants, which favors the development and verification of learning.
- At the end of each course, are valued outcomes and are established improvements or adjustments required by the next process of training.

Data collection design

Data collection should be monitored, analysis of progress and attention to deviations and contingencies, with support in monitoring, implement timely corrective actions to comply with schedule.

Article 21 of the Mexican technical rules for the generation of basic statistics

Data collection design

Quality control at field work

Control, monitoring and supervision in the data collection contributes to improve the quality of the statistics to be provided:

- Ensures that the sample selected is equal to the currently sample collected.
- Ensures that the concepts set out in the conceptual design are understood correctly by the respondent and well captured by the survey.
- The number of visits is reduced to the respondent, as well as the consultations on a possible inconsistency of data.

Processing design

Enter-data quality/data capture

- Acceptance of valid codes for each of the variables.
- Verification of the sequences of the questions set out in the questionnaire.
- Integrity check to the inside of a questionnaire, housing, formation of households, population inside homes and the modules up to the target population of the survey.
- Verification of the integrity of the unit of processing, questionnaire, package, batch, municipality, entity, etc.
- Verification of integrity of the captured, caught against the selected sample.

Processing design

Validation / Edition.

- Ensures **consistency and logical coherence of the questionnaire questions** and the interrelationship between them through a discovery process in data inconsistency.
- It consists of the verification of certain fields in each record to see if they are **consistent**, in the judgment of experts and **automatic debugging process**, consisting of a set of tasks for the **treatment of errors** and to provide information to measure the **quality data**.

Validation process

Processing design

Results presentation.

Generate information that ensures the geographic coverage, ensure the consistency of the data for their release and final results.

Generated products:

- Microdata.
- Consultation Systems:
- Interactive queries
- Sociodemographic indicators.
- Basic Tabulated.

Lessons learned

The MODUTIH has taught us that investing time and financial resources in the process of design, collecting, monitoring and control of all and each one of the stages of the process for the generation of basic statistics, is the best investment that can be made to ensure the quality of the information.

This teaching is valid both for surveys related to economic issues, as for demographic issues and otherwise.

Apply this strategy to all exercises of the collection of information through surveys, necessarily gives us more solid National Information System.

Recommendations

Our experience in the survey for more than one decade of the MODUTIH allows us to make some recommendations:

- The institutional arrangements that are given with the ministries and institutions users of information on this subject, in the framework of the functioning of the specialized technical Committee on Statistics of the Information Society (CTEESI), ensures that the information generated have the quality required by the users.
- The selection of a suitable respondent in the home, and therefore the abandonment of the universal respondent, has direct impact on the quality of the data obtained. How much more, on this subject as dynamic and changing, and so associated with the individual use of the technologies involved.

Recommendations

- The definition of the collection instrument (questionnaire) clearly and solidly supported within a conceptual framework and international recommendations, is a relevant element to take into account to ensure the quality of the information.
- Control, monitoring and supervision of the operation of field involved in the capture of the MODUTIH information contributes substantially to the statistical quality of the information.

Challenges

What are the challenges posed by the MODUTIH for the future?

- The use of electronic means (CAPI) for data collection.
- That the MODUTIH not be anymore a module of the ENOE, to become a unique survey .
- Apply the survey to a direct respondent.

11th World Telecommunication/ICT Indicators Symposium (WTIS-13)

Mexico City, México, 4-6 December 2013

Contribution to WTIS-13

Document C/8-E
5 December 2013

SOURCE: National Markets and Competition Commission (CNMC), Spain

TITLE: Report of the Expert Group on Telecommunication/ICT indicators

Committed to Connecting the World

11th World Telecommunication/ICT Indicators Symposium (WTIS) *Mexico City, 4-6 December 2013*

Report of the Expert Group on Telecommunication/ICT indicators

Iñigo Herguera
EGTI Chair
Statistics Department, CNMC Spain

Committed to Connecting the World

4th EGTI meeting

- 2-3 December 2013, Mexico City
- 67 participants from 35 countries, including regulators, ministries, national statistical offices and operators
- Discussions on inputs received through online forum and presentations

List of topics

- Revenue and investment indicators
- Backbone transmission maps
- Indicators on mobile broadband prices
- Revision of the Partnership's Core Indicators
- TV broadcasting indicators
- Other revisions and future work

Revenue and investment (I)

- WTIM 2012 agreed to collect revenue and investment for telecommunications based on ITU Handbook
 - EGTI endorsed the methodological note to complement the ITU Handbook definitions

Revenue and investment (II)

- WTIM 2012 proposed two topics for discussion:
 - Revenue and investment for the entire ICT sector
 - Foreign direct investment (FDI)

EGTI Conclusions:

- Data are collected by very heterogeneous sources
- Continue discussions in the framework of the Partnership on Measuring ICT for Development

5

Backbone transmission maps

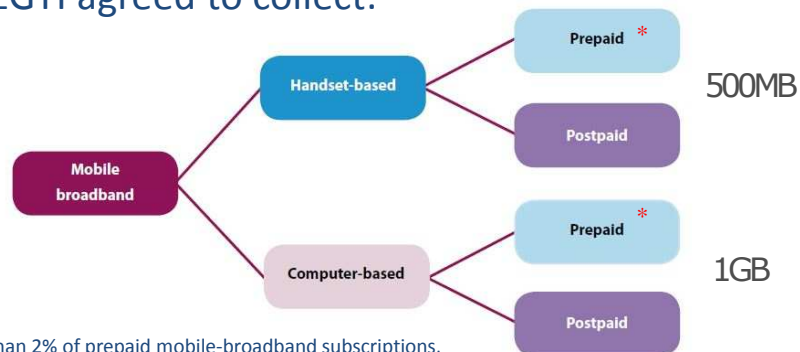

- ITU presented the Interactive Online Transmission maps
- Data collected for most regions
- Countries are encouraged to submit and validate the data

6

Indicators on mobile broadband prices

- Mobile broadband usage increasing sharply
=> adjust the patterns for comparison of prices
- EGTI agreed to collect:

* If less than 2% of prepaid mobile-broadband subscriptions, postpaid prices will be considered

7

Revision of the Partnership's Core Indicators (I)

Core Indicators on ICT infrastructure and access:

- Update the definitions to match those of the ITU Handbook
- Agreement on the following list:
 - Fixed telephone subscriptions per 100 inhabitants
 - Mobile-cellular telephone subscriptions per 100 inhabitants
 - Fixed (wired)-broadband Internet subscriptions per 100 inhabitants, broken down by speed

8

Revision of the Partnership's Core Indicators (II)

4. Wireless-broadband subscriptions per 100 inhabitants
5. International Internet bandwidth per inhabitant (bits/second/inhabitant)
6. Percentage of the population covered by at least a 3G mobile network
7. Fixed broadband Internet prices per month
8. Mobile cellular telephone prepaid prices per month
9. Mobile broadband Internet prices per month (new)
10. TV broadcasting subscriptions per 100 inhabitants (new)

9

TV broadcasting

- WTIM 2012 decided to define new TV broadcasting indicators, such as IPTV
- EGTI agreed the following breakdown of pay-TV subscriptions:
 - IPTV subscriptions
 - Cable TV subscriptions
 - Satellite TV subscriptions
 - Other (MMDS, pay DTT, etc.)

10

Future work (I)

- Wireless-broadband indicators
- Revision of the indicators included in the ITU World Telecommunication/ICT Indicators Long Questionnaire
- Discussion of possible indicators on bundled services

11

Future work (II)

- Discussion on data on subscriptions and whether to separate data on:
 - i. individuals
 - ii. public and private organizations
- Emerging technologies in telecommunication infrastructure (WTIS 2013 session)

12

ICT Development Index

- Data availability remains an issue for integrating new indicators on :
 - i. ICT usage (e.g. in school)
 - ii. latest developments in broadband, e.g. high-speed broadband uptake
- Once data become available, these will be further discussed
- ITU will review the IDI methodology for 'mobile-cellular subscriptions' and 'international Internet bandwidth'
- Discussion on the IDI will continue in the forum

11th World Telecommunication/ICT Indicators Symposium (WTIS-13)

Mexico City, México, 4-6 December 2013

Contribution to WTIS-13

**Document C/9-E
5 December 2013**

English

SOURCE: National Communications Commission, Georgia

TITLE: Revenue and investment in telecommunications/ICT

11th World Telecommunication/ICT Indicators
Symposium (WTIS)
Mexico City, 4-6 December 2013

**Revenue and investment in
telecommunications/ICT**

RATI SKHIRTADZE
Head of Information and Analysis Department

**Georgian National
Communications
Commission**

Outline

- Foreign direct investment (FDI) in telecommunications/ICT sectors
- Revenue and investment for the whole ICT sectors
- Revenue and investment in telecommunications
- Experience in Georgia

FDI in telecommunications/ICT

- Data collected by heterogeneous sources:
 - Central banks (balance of payment statistics)
 - National statistical offices
 - Specific investment authorities
 - Telecom ministries and regulators (usually limited to telecommunications)

The subject should be addressed with all relevant stakeholders

- Data are not often disaggregated/complete enough to produce figures for the ICT sector

Revenue and investment for the whole ICT sector

- Most telecom ministries and regulators collect data **only** from telecommunication operators and service providers
- Other sources:
 - National statistical offices
 - Central banks
 - Sector associations (e.g. IT, software)

The subject should be addressed with all relevant stakeholders

Revenue and investment in telecommunications

- Data are widely available
 - since 1960's ITU collects these data
 - 125+ countries report data
- ... but **important harmonization issues** remain in view of international comparisons

Revenue and investment in telecommunications

■ Methodology

1. ITU Handbook

Methodological note

2. EGTI agreed on a methodological note to supplement the definitions

Objective: improve international data comparability

Revenue and investment in telecommunications

1. Definition of the sector

The sector includes businesses that operate, maintain and provide access to telecommunication networks.

- Resellers are included
- Transmission of TV signals is also included

But ... *activities related to the creation of content are excluded*

Revenue in telecommunications

2. ITU revenue indicators

- Breakdowns: Total / mobile
- Main issues:

| | |
|--|---|
| Retail revenues from residential customers | YES |
| Retail revenues from business customers | YES |
| Wholesale revenues, e.g. interconnection revenues | NO |
| Revenues from resellers and mobile virtual operators | YES |
| VAT and excise taxes | NO |
| Corporate taxes and administrative fees, e.g. numbering fees | YES
(not to be deducted from total revenues) |
| Revenues from device sales and rents | NO |
| Revenues from added value services, e.g. premium SMS | YES |

Investment in telecommunications

3. ITU investment indicators

- Definition of investment
≈ gross fixed capital formation (as in SNA)

| | |
|--|-----|
| Additions less disposals of tangible fixed assets | YES |
| Additions less disposals of intangible fixed assets | YES |
| Investment from national-owned operators in the country | YES |
| Investment from foreign-owned operators in the country | YES |
| Investment from national-owned operators outside the country | NO |
| License fees | NO |
| R&D expenditures | YES |

Georgian National Communications Commission (GNCC)

- GNCC is in charge of regulation of electronic communications and broadcasting
- In 2011 definitions which were used in collecting statistical data were aligned ITU standards
- GNCC collects statistical data from ALL telecom operators and broadcasters on monthly basis
- Investment data is collected annually.

Online Statistical form Screenshot for Revenue (Retail/Wholesale)

Wholesale voice service - Interconnection with resident operators-from fixed wired/wireless networks

Wholesale voice service - Interconnection with non-resident operators

Wholesale voice service - Interconnection with resident operators-from mobile communication networks

Wholesale data transfer/internet service - Extended Interconnection (Peering)

Retail service provided by using mobile communication network - Usage (Minutes) charge

Retail service provided by using mobile communication network - Roaming

| | | | | | |
|----------|-----------|---|------------|-----------|----------|
| Oct-2013 | Retail | Retail voice service provided by using fixed wireless network - Usage (Minutes) charge | 1217904.00 | 219223.00 | 0.00 |
| Oct-2013 | Retail | Retail voice service provided by using fixed wireless network - Value added services | 1365.00 | 246.00 | 0.00 |
| Oct-2013 | Retail | Data transfer/internet service provided by using fixed wireless network - Subscription fee | 326483.00 | 58767.00 | 0.00 |

11th World Telecommunication/ICT Indicators Symposium (WTIS) *Mexico City, 4-6 December 2013*

TV broadcasting indicators

Ivan Vallejo
Market analyst, ICT Data and Statistics Division
International Telecommunication Union

Committed to Connecting the World

TV broadcasting

- International Standard Industrial Classification of All Economic Activities (Rev 4) includes under telecommunications the “*transmission of television signals*”
- Since 1960, ITU collects data to measure TV uptake
- **WSIS, Target 8:** “Ensure that all of the world’s population has access to television and radio services”

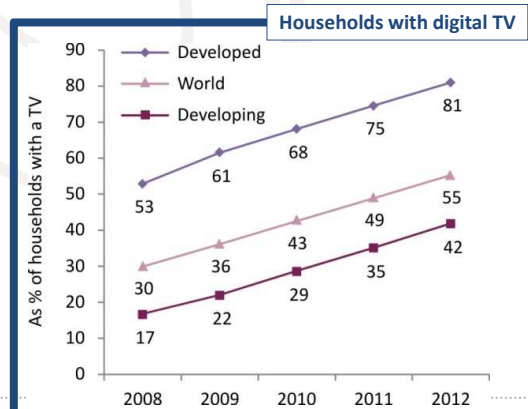

Background – recent ITU work

- WTIM 2012 held in Bangkok in September 2012
 - Session on digital broadcasting
 - EGTI mandated to define indicators for new TV services, such as IPTV
- EGTI reviewed ITU indicators on TV broadcasting in 2013
- MIS 2013, launched in October 2013
Ch. 5: Digital Broadcasting Trends →

MIS 2013 – Findings digital broadcasting

1. Globally, almost 80% of households with a TV
2. Digital transition passed the halfway mark

MIS 2013 – Findings digital broadcasting

3. Increasing cross-platform competition

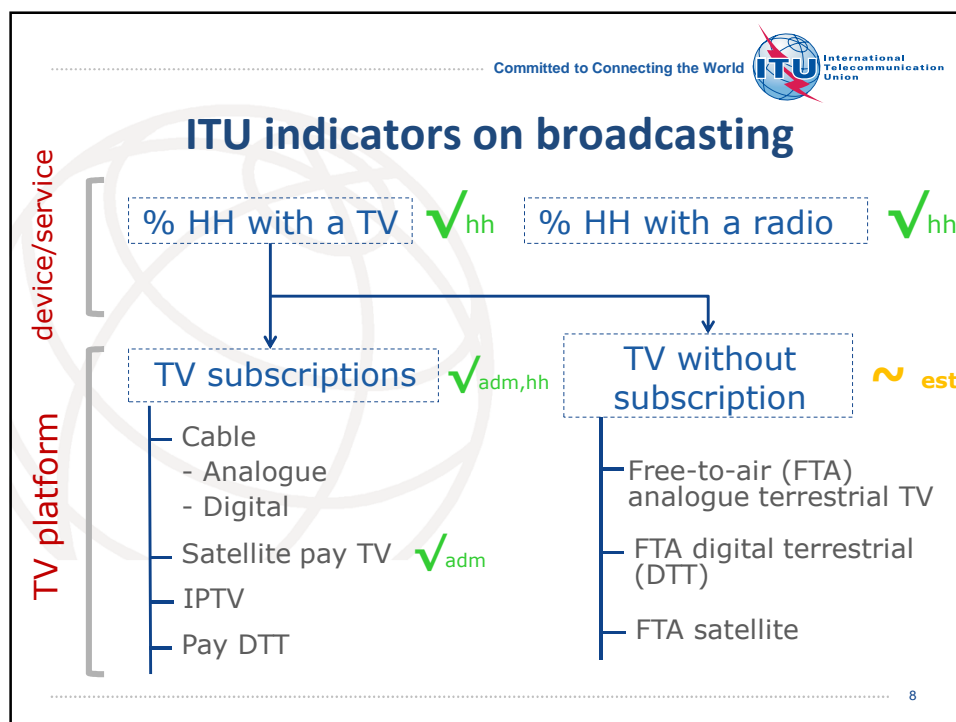

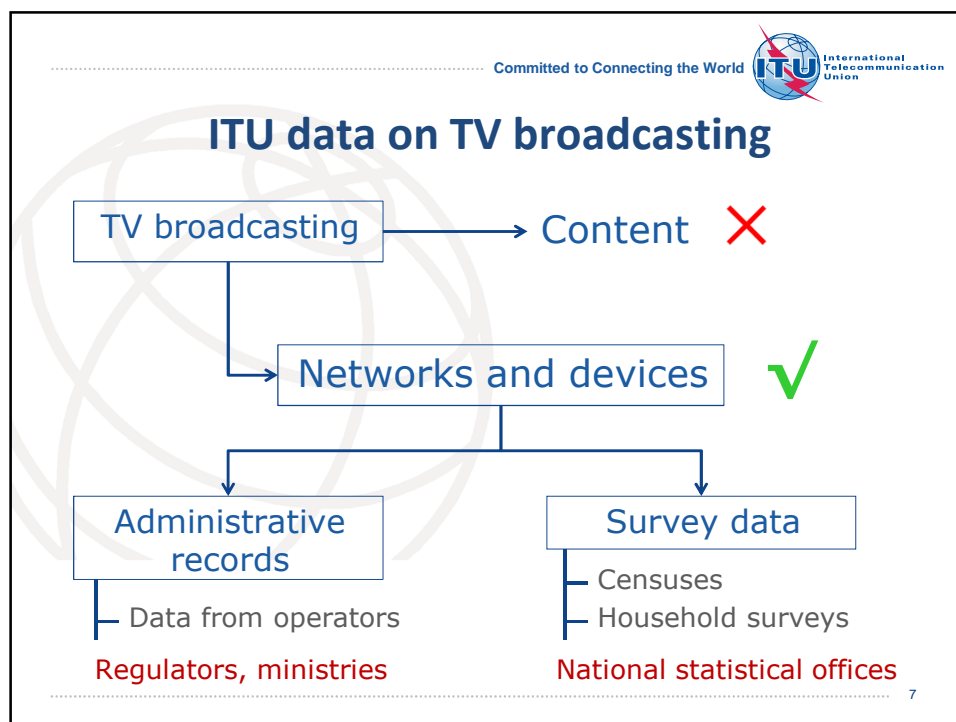

5

MIS 2013 – Findings digital broadcasting

4. Growth of pay TV

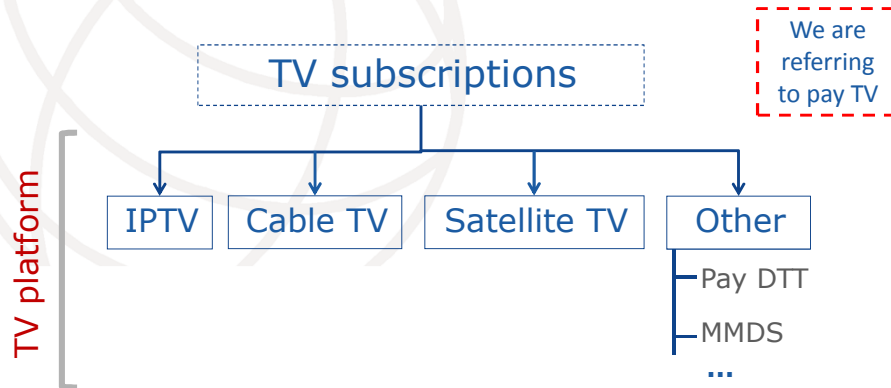

6

ITU indicators on TV broadcasting

- EGTI proposed changes to administrative indicators on TV broadcasting:

9

ITU indicators on TV broadcasting

Not covered by the proposed administrative indicators:

- Free-to-air TV ✓ household surveys
- TV coverage
- Over-the-top (OTT) Internet TV and video, e.g. YouTube or Netflix
- Mobile TV

Report of the work of the Expert Group on ICT Household Indicators (EGH)

World Telecommunication/ICT Indicators Symposium (WTIS)
5 December, 2013 / Mexico City, Mexico

Alexandre Barbosa

Chair of the Expert Group on ICT Household Indicators

Agenda

- ❑ **The ITU Expert Group on ICT Household Indicators (EGH)**
 - *Overview*
- ❑ **1st Meeting of the ITU Expert Group on ICT Household Indicators (EGH) - São Paulo, Brazil, 4-6 June 2013**
- ❑ **Outcomes of online and face-to-face discussions**
 - *Revision of existing indicators*
 - *New indicators*
 - *Cross-cutting issues*
- ❑ **ITU Manual for Measuring ICT Access and Use by Households and Individuals**

ITU Expert Group on ICT Household Indicators (EGH)

Overview

- ❑ Launched in May 2012, following a decision by the 9th World Telecommunication/ICT Indicators Meeting (Mauritius, Dec/ 2011);
- ❑ **Main objectives:** revision of the Partnership core indicators on ICT access in Households and use by individuals and the ITU Manual for Measuring ICT Access and Use by Households and Individuals, in collaboration with ITU Member States.
- ❑ Work methodology: online and face-to-face discussion.

on ICT Household
Indicators (EGH)
1st meeting
Welcome
São Paulo | June 4-6, 2013
cetic.br nic.br egi.br

cetic.br nic.br

1st Meeting of the ITU Expert Group on ICT Household Indicators (EGH)

Objectives

- ❑ To examine the contributions received from members of the EGH Online Forum over the past year;
- ❑ To finalize the revision of the core list of indicators on ICT household access and individual ICT use;
- ❑ To finalize the related revision of the *ITU Manual for Measuring ICT Access and Use by Households and Individuals*.

Details

- ❑ Held in São Paulo, Brazil, on 4-6 June 2013;
- ❑ Organized by ITU and hosted by the Brazilian Network Information Center (NIC.br);
- ❑ Attended by 38 participants (NSOs, ministries, regulators and other organizations officially in charge of monitoring the information society from 18 countries) as well as UNECLAC.

EGH Online Forum and Face-to-face Meeting

Discussion and Outcomes

Revision of existing core indicators

Proposal for new indicators

Cross-cutting issues

Expert Group
on ICT Household
Indicators (EGH)

Revision of Existing Core Indicators

Indicators revised by the EGH

- ❑ **HH1** – Proportion of households with a radio
- ❑ **HH2** – Proportion of households with a TV
- ❑ **HH3** – Proportion of households with telephone
- ❑ **HH4** – Proportion of households with a computer
- ❑ **HH5** – Proportion of individuals using a computer
- ❑ **HH6** – Proportion of households with Internet access
- ❑ **HH7** – Proportion of individuals who use the Internet in the last 12 months
- ❑ **HH8** – Location of individual use of the Internet in the last 12 months
- ❑ **HH9** – Internet activities undertaken by individuals in the last 12 months
- ❑ **HH10** – Proportion of individuals who used a mobile cellular telephone in the last 12 months
- ❑ **HH11** – Proportion of households with access to the Internet by type of access
- ❑ **HH12** – Frequency of individual use of the Internet in the last 12 months

Revision of Existing Core Indicators

New definitions

Concepts & Definitions

- ❑ **HH1 – Proportion of households with a radio**
 - Definition updated to include other devices where radios can be integrated.
- ❑ **HH2 – Proportion of households with a TV**
 - Definition updated in order to include other devices where TV can be integrated.

Expert Group
on ICT Household
Indicators (EGH)

- ❑ **HH3 – Proportion of households with a telephone**
 - Clarifications on the availability of the signal were added to the sub-indicator on mobile telephone.

Comitê Gestor da Internet no Brasil

cgi.br

Revision of Existing Core Indicators

New definitions

Concepts & Definitions

□ HH4 – Proportion of households with a computer

- Definition updated to include tablets and similar handheld computers.

**Expert Group
on ICT Household
Indicators (EGH)**

□ HH5 – Proportion of individuals using a computer

- Definition of computer updated in order to include tablets and similar handheld computers.

cetic.brnic.br

Comitê Gestor da Internet no Brasil

cgi.br

Revision of Existing Core Indicators

New definitions

Concepts & Definitions

□ HH8 – Location of individual use of the Internet

- Response categories updated: the items referring to access via mobile devices were replaced by “in mobility”;
- The two response categories on community and commercial access centers were revised to emphasize that they refer to access “typically free of charge” and “typically paid”, respectively.

**Expert Group
on ICT Household
Indicators (EGH)**

cetic.brnic.br

Revision of Existing Core Indicators

New definitions

Concepts & Definitions

□ HH9 – Internet activities undertaken by individuals

- List of activities was updated;

Expert Group
on ICT Household
Indicators (EGH)

□ HH11 – Proportion of households with access to the Internet by type of access

- Response categories updated to adjust to the ITU/OECD definition of broadband and to clearly distinguish between [fixed (wired) and wireless] broadband and [fixed (wired) and mobile] narrowband.

New core indicators

□ HH13 – Proportion of households with multichannel television, by type;

Definition:

- Proportion of households with multichannel television (TV) and by type of multichannel service.

Data should be collected on:

- Cable TV (CATV);
- Direct-to-home (DTH) satellite services;
- Internet-protocol TV (IPTV);
- Digital terrestrial TV (DTT).

Expert Group
on ICT Household
Indicators (EGH)

New core indicators

□ HH14 – Barriers to household Internet access

Definition:

- Barriers to Internet access for households without Internet access. It is expressed as a proportion of households without Internet access.

Response categories:

- Do not need the Internet (not useful, not interesting, lack of local content);
- Have access to the Internet elsewhere;
- Lack of confidence, knowledge or skills to use the Internet;
- Cost of the equipment is too high;
- Cost of the service is too high;

Expert Group
on ICT Household
Indicators (EGH)

- Privacy or security concerns;
- Internet service is not available in the area;
- Internet service is available but it does not correspond to household needs;
- Cultural reasons (e.g. exposure to harmful content).

New core indicators

□ HH15 – Individuals with ICT skills, by type of skills

Definition:

- This refers to ICT skills, defined for the purpose of this indicator as having undertaken certain computer-related activities in the last three months.

Response categories:

- Copying or moving a file or folder;
- Using copy and paste tools;
- Sending e-mails with attached files;
- Using basic arithmetic formulae in a spreadsheet;
- Connecting and installing new devices;

Expert Group
on ICT Household
Indicators (EGH)

- Finding, downloading, installing and configuring software;
- Creating electronic presentations with presentation software (including text, images, sound, video or charts);
- Transferring files between a computer and other devices;
- Writing a computer program using a specialized programming language.

Comitê Gestor da Internet no Brasil

cgi.br

New core indicators

□ HH16 – Household expenditure on ICT

Definition:

- Percentage of total household expenditure that is expended on ICT goods and services.

Data should be collected on:

- Telephone and telefax equipment;
- Telephone and telefax services;
- Equipment for the reception, recording and reproduction of sound and picture;
- Information processing equipment;
- Repair of audio-visual, photographic and information processing equipment.

**Expert Group
on ICT Household
Indicators (EGH)**

cetic.br
nic.br

Comitê Gestor da Internet no Brasil

cgi.br

Proposal of new core indicators

Open for discussion on the EGH Online Forum

Potential new core indicators open for discussion:

- Individuals using the Internet by type of portable device and network used to access the Internet;
- Internet security;
- Children and youth online protection;

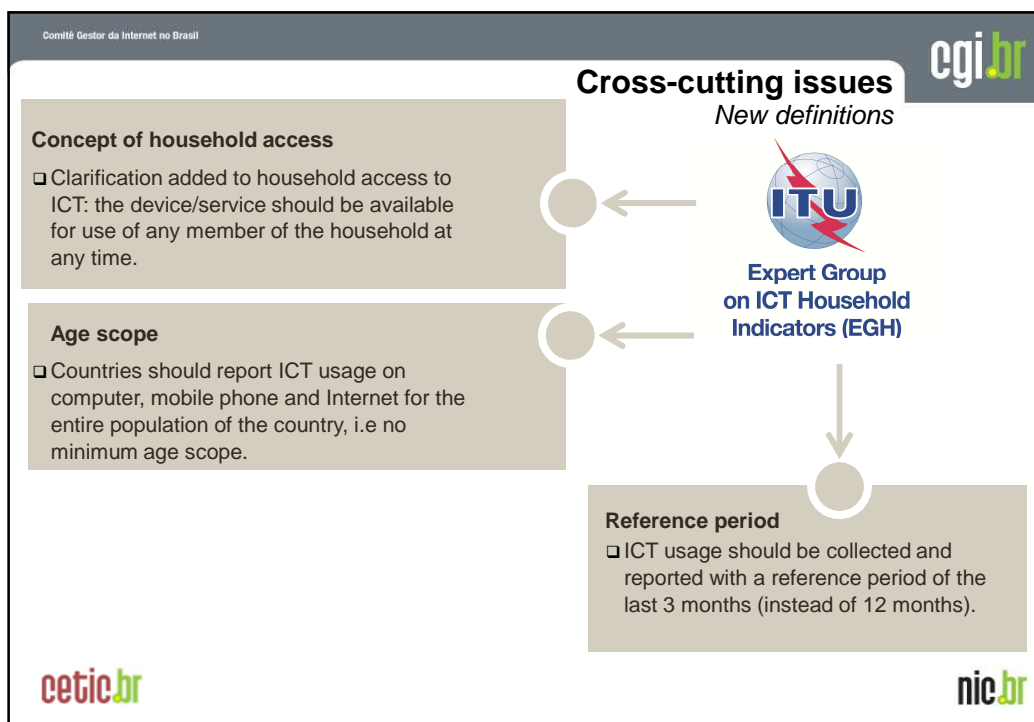

**Expert Group
on ICT Household
Indicators (EGH)**

Relevant topics for future discussion

- Green ICT, mobile phone activities, gender-relevant ICT indicators, revenue and investment for the ICT sector, ICT for people with disabilities.

cetic.br
nic.br

Comitê Gestor da Internet no Brasil

cgi.br

New Core Indicator List

Core indicators on access to, and use of, ICT by households and individuals

| | |
|------|---|
| HH1 | Proportion of households with a radio |
| HH2 | Proportion of households with a television |
| HH3 | Proportion of households with telephone |
| HH4 | Proportion of households with a computer |
| HH5 | Proportion of individuals using a computer |
| HH6 | Proportion of households with Internet |
| HH7 | Proportion of individuals using the Internet |
| HH8 | Proportion of individuals using the Internet, by location |
| HH9 | Proportion of individuals using the Internet, by type of activity |
| HH10 | Proportion of individuals using a mobile cellular telephone |
| HH11 | Proportion of households with Internet, by type of service |
| HH12 | Proportion of individuals using the Internet, by frequency |
| HH13 | Proportion of households with multichannel television, by type |
| HH14 | Barriers to household Internet access |
| HH15 | Individuals with ICT skills, by type of skills |
| HH16 | Household expenditure on ICT |

cetic.br **nic.br**

Final Recommendations

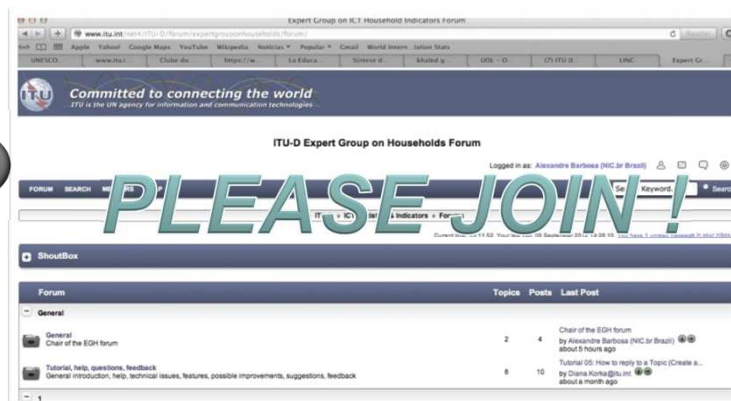

The core indicators list...

- ☐ ...is not exhaustive;
- ☐ ...should be used as minimum list when designing or redesigning the data collection;
- ☐ ...is aimed at providing a common platform for minimal international comparability;
- ☐ ...is reviewed regularly to ensure relevance and usability.

Statistics Sweden

WTIS, Mexico City, 5 December 2013

Statistiska centralbyrån Statistics Sweden

ICT usage in households and by individuals

Background and method

- Surveys carried out in 1984, 1989, 1995, 2000, 2001, 2002-
- Since 2002 EU-harmonized and yearly
- Target population, People living in Sweden age 16-74
 - ~ 7 000 000 individuals (total of 9 600 000)
 - ~ 3 900 000 households
- Frame, The Swedish total population register (TPR)
- Stratified Simple Random Sampling
- 6 age groups and gender, total 12 strata
- ~2 500 individuals are sampled
- 55 % response rate 2013
- Survey Vehicle: Stand-alone
- Data collection method: Telephone interviews

Statistiska centralbyrån

Statistics Sweden

Eurostat model Questionnaire

- A. Access to Information and Communication Technologies
- B. Use of computers
- C. Use of the Internet
- D. Use of e-Government
- E. Use of e-Commerce
- F. e-skills
- Socio-demographic background characteristics
- Special topic every year
 - 2011 e-skills
 - 2012 mobile use of internet
 - 2013 e-government
 - 2014 use of Cloud Services

Statistiska centralbyrån

Statistics Sweden

ICT skills indicators

- Aim: Every individual should be able to participate in the "Information society"
 - Private (Social aspects, government interaction)
 - Professional (work and education)
- Access to computer/internet, frequency of use
 - Survey definition of computer: *desktop, laptop, netbook, tablet, **excluding smart phone.***
- Main dimensions of skills
 - **Computer skills**
 - **Internet skills**
- Different types of measurement
 - **Activities carried out**
 - Self judged skills
 - Communicate, changing job, protect personal data/ computer from virus
 - Education
 - Formal education, courses, self study, informal assistance

Benchmarking indicators – Computer activities
Share of individuals age 16-74, EU 27:Sweden

Individuals who carried out 3 or more of the 6 Computer and Internet related activities

Share of individuals age 16-74, European Union (27 countries), 2005-2012

Recommendations and summing up

SCB

Statistics Sweden

Statistiska centralbyrån

- What should be included in the definition of computer? Smart phone or not?
- Measuring the performed activities is preferable to self judged skills
- Computer skills indicators are good for measuring skills for employability
- For measuring other parts of participating in society, internet activities might be more useful
- Indicators for consistent benchmarking with EU countries are available from 2005
- Indicators are under development for EU survey 2015 and forward

SCB
Statistiska centralbyrån Statistics Sweden

SOURCE: UNCTAD

TITLE: Expert Meeting on Gender and ICT Indicators: conclusions and next steps

Expert Meeting on Gender and ICT Indicators
3 December 2013, Mexico City

Conclusions and next steps

- The meeting **acknowledged the work done by the consultant** in assessing the availability of sex-disaggregated and gender-specific ICT indicators and the proposed areas where there is demand for such data
- The meeting highlighted **the importance of collecting sex-disaggregated data** for the Partnership core ICT indicators included in the report.
- The Partnership should build on the report “Stocktaking and Assessment on Measuring ICT and Gender” to further **examine the feasibility** of collecting proposed indicators (methodology and resources)
- For the new proposed indicators, the Partnership could conduct **an inventory of data availability**

Expert Meeting on Gender and ICT Indicators
3 December 2013, Mexico City

Conclusions and next steps

- **A consultation process** that would include experts and countries would gather more detailed country experiences on ICT gender-related data collection
- The work on the Gender and ICT indicators should serve to **raise awareness on gender-related ICT statistics**, and build a bridge between the ICT statistics and the gender statistics communities
- It was agreed that the **priority areas** where sex-disaggregated data should be collected include: Household access and individual use of ICT , Education and ICT Indicators, ICT Employment, ICT Business and Entrepreneurship, E-Government

TITLE: Measuring Gender and ICT

Measuring Gender and ICT

Nancy J Hafkin, PhD
UNCTAD consultant on behalf of the
Partnership.

11th World Telecommunications/ICT Symposium
5 December 2013
Mexico City

Why are gender and ICT statistics important?

- ☐ Women are the majority of the unconnected
- ☐ ICTs tend to exacerbate existing divides
 - ✓ Girls and women already on wrong side on income, literacy, scientific education divides
 - ✓ Failure to access and use ICTs will result in further marginalization
 - ✓ Question of equal rights, democracy, social and economic inclusion
- ☐ To ensure economic efficiency and national development
 - ✓ Full utilization of human resources especially important in global knowledge society
 - ✓ Every woman added to the information society is an addition to national economic growth

Measurement of gender and ICT

- ☐ Concern of Partnership since 2004
- ☐ Without data, there is no visibility: without visibility, no priority
 - ✓ Lack of statistics often reflected in lack of policy
- ☐ Need for greater awareness of ICT on the part of gender statistics

Purpose of this report

- ☐ Builds on earlier gender-related statistics work of the Partnership
- ☐ Underlines gaps in collection of core access and use indicators
- ☐ Identifies main gaps based on needs and demand for indicators
- ☐ Identifies potential new gender-related ICT indicators

Current gender-related indicators

- ❑ 57 Core ICT indicators
- ❑ 12 gender-related indicators
 - ✓ Seven on individual use
 - ✓ Three on education
 - ✓ Two on e-government
 - ✓ None yet in employment or business

Demand for gender-related indicators

| Categories of ICT indicator collection | Topics of demand for gender-related indicators |
|--|---|
| Household access and individual use | Accessing and using ICTs
Gender barriers to the Internet |
| Education | ICTs and education at all levels |
| Employment | Employment in ICT occupations
ICT in the work force
ICT skills |
| Business | Employment in the ICT sector
ICT in entrepreneurship, especially in micro-small businesses (MSEs)
Use of mobile phones and Internet |
| E-government | Gendered access, use of e-government
Availability of appropriate e-government content for women |

Principles of identifying additional indicators

- ☐ National, regional and international information society policy importance
- ☐ Simple, realistic and measurable
- ☐ High probability of country response
- ☐ Minimal burden of data collection

Existing Household and individual use indicators

| ID | Indicator definition | Further work needed |
|------|---|---------------------|
| HH5 | Proportion of individuals using a computer | No change |
| HH7 | Proportion of individuals using the Internet | No change |
| HH8 | Proportion of individuals using the Internet, by location | No change |
| HH9 | Proportion of individuals using the Internet, by type of activity | No change |
| HH10 | Proportion of individuals using a mobile cellular telephone | No change |
| HH12 | Proportion of individuals using the Internet, by frequency | No change |
| HH15 | Individuals with ICT skills, by type of skills | No change |

Need for household/individual data

☐ On use of mobile phones—

- ✓ To know the extent of M/F differentials in ownership, seen as a measure of women's empowerment
- ✓ To look at differentials in use by M/F
- ✓ Mobile phone activities more important than Internet in developing countries

☐ On individual barriers to Internet use

- ✓ To see gender differentials and identify problem areas

Household access and Individual Use Additional Indicators

| Additional indicator | Further work needed |
|---|---|
| Proportion of individuals who own a mobile phone | Definition of mobile phone ownership |
| Proportion of individuals using a mobile phone, by type of activity | Development of responses on mobile phone activities |
| Proportion of individuals not using the Internet, by type of barriers | Development of list of barriers to Internet access by individuals |

Existing Education indicators

| Indicator | Definition |
|-----------|---|
| ED6 | Proportion of learners who have access to Internet at school |
| ED7 | Proportion of learners enrolled at post-secondary level in ICT-related fields |
| ED8 | Proportion of ICT-qualified teachers in schools |

Education data needs

- ❑ Need to assess gender differentials in preparing next generation, at all levels for information society
 - Teaching and learning using ICTs
 - Global competitiveness advantage for countries that are able to institute this
 - *Leaky pipeline* phenomenon with girls and women in scientific and technical fields

Additional education indicators

| Indicator definition | Further work needed |
|--|---|
| Proportion of primary and secondary school teachers trained to teach subjects using ICT facilities (ISCED 1-3) (sex disaggregated) | Based on existing UNESCO (non-Core indicator) |
| Proportion of pupils enrolled in programmes offering computer-assisted instruction (ISCED levels 1-3) (sex disaggregated) | Based on existing UNESCO (non-Core indicator) |
| Proportion of pupils enrolled in programmes offering Internet-assisted instruction (ISCED levels 1-3) (sex disaggregated) | Based on existing UNESCO (non-Core indicator) |
| Proportion of pupils enrolled in programmes offering courses in basic computer skills or computing (ISCED 1-3) (sex disaggregated) | Based on existing UNESCO (non-Core indicator) |
| Proportion of graduates in ICT-related fields at post-secondary non-tertiary and tertiary levels (sex disaggregated) | Based on existing UNESCO (non-Core indicator) |

Employment data needs: ICT occupations

- ☐ Strong demand for data, especially disaggregated by sex, on employment in ICT occupations
- ☐ High policy relevance
- ☐ Work needed on accepted definition of ICT employment
- ☐ Knowledge of gender distribution of ICT employment critical to national economic growth and competitiveness

Proposed ICT employment/occupations indicator

| Indicator | Methodological work needed |
|--|--|
| Proportion of employees in ICT occupations (sex disaggregated) | Definitions and measurement of ICT occupations |

- No existing indicators on ICT occupations

Data needs on the ICT sector

- ☐ The ICT sector comprises the production of ICT goods and services (OECD definition)
- ☐ Disaggregation of data by sex would indicate:
 - ✓ women's share of employment in this sector

Existing ICT sector indicator

| Existing indicator: ICT1 | Further work needed |
|--|--|
| Proportion of total business sector workforce involved in the ICT sector | Member States agreement on classification of ICT sector and sex disaggregation |

- This indicator collected by UNCTAD since 2004, with scarce but improving data availability, but not disaggregated by sex

Need for data on women in business

☐ **Business use** indicators

- ✓ To measure the access to and use of ICT by women in the business sector
- ✓ Collected through enterprise surveys
- ✓ Are there differences in workforces composed primarily of men or primarily of women in their access to and use of ICT?

Existing business indicators

| Proposed revision | | |
|--------------------------------|---|--|
| All business access indicators | Addition of filter question on gender composition of business employees | Precise formulation of filter question to be determined: male/female dominated, gender neutral |

| | | | |
|------------|---|-----------|--|
| B 1 | Proportion of businesses using computers | B7 | Proportion of businesses receiving orders over the Internet |
| B2 | Proportion of persons employed routinely using computers | B8 | Proportion of businesses placing orders over the Internet |
| B3 | Proportion of businesses using the Internet | B9 | Proportion of businesses using the Internet by type of access |
| B4 | Proportion of persons employed routinely using the Internet | B10 | Proportion of businesses with a local area network (LAN) |
| B5 | Proportion of businesses with a Web presence | B11 | Proportion of businesses with Extranet |
| B6 | Proportion of businesses with an Intranet | B12 | Proportion of businesses using the Internet, by type of activity |

Need for data on women entrepreneurs

☐ Entrepreneurship

- ✓ Interest from the development community in ICTs and women's entrepreneurship
- ✓ ICTs seen as major catalyst to accelerate women's entrepreneurship
- ✓ Concentration on micro and small enterprises, where women entrepreneurs most prevalent
- ✓ Are women entrepreneurs as likely as men to exploit the capacities of the technology to further their productivity for the success of the enterprise?

Proposed additional indicators on entrepreneurship/small business owners and ICT

| Indicator | Further work needed |
|--|---|
| Proportion of micro, small business owners/entrepreneurs using Internet by sex of owner | Elaboration and implementation of a survey instrument for micro and small businesses with an ICT module |
| Proportion of micro, small business owners/entrepreneurs using mobile phones by sex of owner | |
| Proportion of micro, small business owners/entrepreneurs using Internet <u>by type of activity</u> and sex of owner | Development of responses by type of activities |
| Proportion of micro, small business owners/entrepreneurs using mobile phones <u>by type of activity</u> and sex of owner | Development of responses by type of activities |

ICT data availability problems

- ☐ Few countries, except in Europe, collect core ICT individual-level indicators
- ☐ Many NSOs in developing countries do not collect ICT indicators, especially on individual use
- ☐ Those that collect usage data normally can disaggregate them by sex since it is a standard classificatory variable in the household survey
- ☐ Gap has implications for the paucity of gender and ICT data

Recommendations

- ☐ Countries need to intensify efforts to collect data by sex for current partnership indicators
 - ✓ Especially ICT use by individuals, with sex as classificatory variable
 - ✓ More data needed especially on mobile phones
- ☐ Collecting gendered statistics need not be a burden
- ☐ Training of supervisory and field personnel on sensitivity to gender bias
- ☐ At international, regional and national level, more communication needed between ICT statistics and gender statistics

Going forward

- ☐ Possibilities for future work:
 - ✓ Gender equality in broadband access
 - ✓ ICT-related gender-based violence (impact)
 - ✓ Work force skills by occupational groups
 - ✓ Special attention to ICT employment indicators
- ☐ Work of existing groups, such as Expert Group on Household Indicators, ILO expert groups important
- ☐ Other priority areas to consider?

Thank you!!

11th World Telecommunication/ICT Indicators Symposium (WTIS-13)

Mexico City, México, 4-6 December 2013

Contribution to WTIS-13

**Document C/15-E
6 December 2013**

English

SOURCE: International Labour Organisation (ILO)

TITLE: Indicators on Gender and ICT Employment Indicators

ICT Employment Indicators and gender

David Hunter
International Labour Organization

11th World Telecommunications/ICT
Indicators Symposium
Mexico City, 4-6 December 2013

06/12/2013

Why do we need indicators of employment in ICT?

Strong impact of ICT on labour market, and occupational skills and structures

- Persistent need to capture and analyse employment effects associated with the production and deployment of ICT
- Shortages of ICT skills may have a strong impact on economic development and employment growth
- 19 out of 23 responses to OECD questionnaire on ICT policy identified ICT skills and employment as a priority

Inequality in acquisition of ICT skills and employment opportunities among population groups (including women)

- Increasing importance of ICT skills for ensuring social inclusion and access to services and employment opportunities

Policy debate has not been well-informed by good quality statistical information on the structure of the ICT labour market

- **No unified, internationally accepted definition of ICT employment**

Statistics

ICT employment and gender

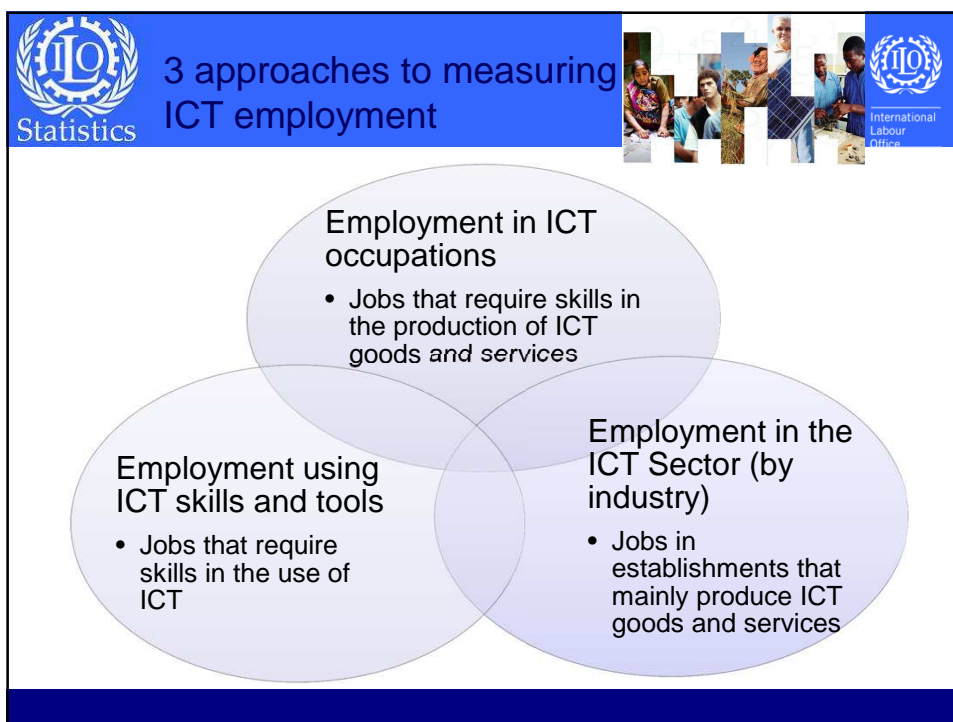

International Labour Office

Gender specific issues

- Significantly fewer women than men are employed as ICT specialists and in the ICT sector
 - Women's share of employment in OECD countries:
 - As ICT specialists = 18%
 - In ICT sector = 30%
 - ❖ Significant variation between countries in women's share of employment as ICT specialists and in the ICT Sector
- Higher proportion of women employed in jobs requiring skill as ICT users?
 - Many of these jobs are in occupations traditionally dominated by women, but detailed analysis by gender has not been done

Employment in the ICT Sector

- Jobs in establishments that mainly produce ICT goods and services
- Proposed revision of existing core indicator:
 - (ICT 1) Proportion of total business sector workforce involved in the ICT sector **(by sex)**
 - **Need to add disaggregation by sex**
 - ❖ Includes some jobs that **do not** require ICT skills
 - ❖ Does not include **all jobs** that require ICT skills
- ICT Sector is defined as an alternative aggregation of the International Standard Industrial Classification (ISIC Rev. 4):

‘a statistical basis for the measurement, in an internationally comparable way, of that part of economic activity that is generated by the production of ICT goods and services’

ICT Sector in ISIC Rev 4

Employment in ICT Sector – data sources

- Requires industry coding at a detailed level of ISIC or a related classification
- Establishment surveys provide data on total employment by economic activity
 - Good quality industry information
 - Breakdown by sex not always available
 - Coverage of informal sector may not be good
- Household surveys (e.g. Labour force survey) and Population Census
 - Poorer quality industry coding
 - Disaggregation by sex is possible and usual
 - Better coverage of informal sector
- Administrative data sources
 - Varying quality, availability and coverage

Employment in ICT occupations

| | |
|--|--|
| Proposed additional indicator | <ul style="list-style-type: none"> • Proportion of employment in ICT occupations by sex |

Statistics

Employment in ICT Occupations – data sources

International
Labour
Office

- ✓ For complete information occupation coding is needed at the most detailed 4-digit level of ISCO-08 or a related national classification
 - Partial information can be obtained from data at 2-digit level
- Establishment surveys frequently do not identify occupations
 - Breakdown by sex not always available
 - Coverage of informal sector may not be good
- Household surveys (e.g. Labour Force Survey) and Population Census
 - The most common and reliable source
 - Occupation commonly available (almost always in LFS and Census)
 - Not always coded to 4-digit level
 - Disaggregation by sex is possible and usual
- Administrative data sources
 - Varying quality, availability and coverage

Statistics

Employment using ICT skills and tools

International
Labour
Office

- Jobs that require skills in the use of ICT
- Defined in terms of occupational categories
- Approximately 30% of total employment (OECD average)
- No globally agreed list
 - OECD has developed a list for ISCO-88 and for several national classifications
 - ICT Specialists
 - ICT Advanced Users
 - ICT Basic users
 - Many of these occupations have a high women's share of employment
- A moving target!
 - An increasing number of occupations require ICT skills
 - Difficult to measure over time
 - Likely to require data at ISCO 4-digit level
- More development work needed

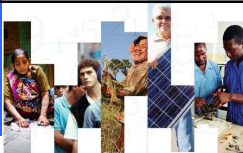

Currently available data

- Some international data are compiled in OECD and Eurostat publications and outputs
 - Limited coverage for non OECD countries
- National publications and databases
 - Mainly OECD countries
- ILO collects annual data disaggregated by sex for ISCO-08 Sub-major Group 25: Information and Communications Technology Professionals

Next steps

- Need to endorse disaggregation by sex for core indicator on employment in the ICT Sector
- Agreement needed on occupations to be included in proposed new core indicator 'Employment in ICT Occupations'
 - ILO proposes to circulate a discussion paper among practitioners in ICT statistics and national experts in occupation classification
- Further investigation of viability of an indicator of 'Employment using ICT Skills and Tools'

11th World Telecommunication/ICT Indicators Symposium (WTIS-13)

TITLE: Measuring ICT and Gender Indicator in Ghana

MEASURING ICT AND GENDER INDICATOR IN GHANA

GHANA STATISTICAL SERVICE,

11th WTIS, MEXICO

4-6 DECEMBER, 2013

ERNESTINA HOPE TURKSON

OUTLINE

- Background
- Survey vehicle used to collect gender ICT statistics
- Indicators
- Analysis and Dissemination of gender ICT statistics
- Recommendation and Conclusion

THE SURVEY VEHICLE USED TO COLLECT GENDER ICT STATISTICS

- Ghana use multi-purpose survey vehicles for collecting ICT household data
- The Ghana Statistical Service -mandated by law to conduct censuses and surveys (social, economic, demographic, and other issues)
 - Different household surveys have served as vehicles for ICT questions over the years

5-Dec-13

3

THE SURVEY VEHICLE USED TO COLLECT GENDER ICT STATISTICS

Specifically, GSS has used the following vehicles to collect, compile and analyse data on ICT by gender

- Population and Housing Census PHC 2010
- The Ghana Living Standards Survey Surveys-: GLSS 6 (2013).

5-Dec-13

4

2010 CENSUS

Module are created to compile ICT data
(This is individual-level indicator)

- Questions asked:
 - Does the [name] own mobile phone?
 - Does the [name] use internet facility
Items include:
 - At home
 - Internet cafe
 - On phone
 - Other mobile device

Ghana Living Standards Survey (round 5) 2005 - 2006

- Questions asked:
 - Does the household have access to
 - Items include:
 - Fixed line phone
 - Mobile phone network
 - Personal computers
 - Internet (other use)
 - E-commerce
 - Paid cable network

GLSS6 2013

Special module are created to compile ICT data

- Business
 - Percentage of businesses with computers by sex of owners
 - Percentage of businesses with internet access
 - Percentage of businesses with a web site

Education

- Percentage of students enrolled in tertiary education having internet access for students for study purposes by sex
- Enrolled student-to-personal computer ratio (in primary and secondary schools and tertiary education) by sex
- Percentage of ICT qualified teachers in primary and secondary schools (of total number of teachers) by sex

MOBILE PHONE

Out of these question the following indicators were developed to determine the status of ICT in the country

| Indicators | Both Sexes | Men | Women |
|--|------------|-------|-------|
| Population 12 years and older owning mobile phone within economic activity status | | | |
| All economic activity status | 47.7% | 53.1% | 46.9% |
| Employed | 55.5% | 62.3% | 48.9% |
| Unemployed | 55.8% | 58.6% | 53.6% |
| Not active | 32.4% | 34% | 31.1% |

INTERNET USAGE

| Indicators | Both Sexes | Men | Women |
|--|------------------|----------------|----------------|
| Distribution of the population 12 years and older using internet facilities | | | |
| All Regions | 1,312,971 | 832,789 | 480,182 |
| Population 12 years and older using internet by level of education | | | |
| Level of Education | 7.8% | 10.30% | 5.40% |
| No education | 13.9% | 11.4% | 16.6% |
| Primary | 8.8% | 7.4% | 10.40% |
| Middle/JHS | 40.7% | 40.7% | 40.7% |
| Secondary | 18.9% | 20.5% | 17.10% |
| Voc./Tech. | 4% | 3.9% | 4% |
| Post-Sec. | 8.4% | 9.3% | 7.4% |
| Tertiary | 5.3 | 6.8% | 3.7% |

5-Dec-13

9

HOW DATA ARE ANALYZED

- By sex, age, relationship to head of household, education, region, localities and marital status.

58% of the population 12+ years with mobile phones were between the ages of 20 - 39 years

| Population 12 years and older with mobile phones by age and sex | | | |
|---|-------|-------|---------|
| Age Group | Total | Males | Females |
| All ages | 100 | 100 | 100 |
| 12 -14 | 1.1 | 1.1 | 1.2 |
| 15-19 | 8.7 | 8.6 | 8.7 |
| 20-24 | 17.1 | 16.5 | 17.7 |
| 25-29 | 16.6 | 16.0 | 17.2 |
| 30-34 | 13.5 | 13.5 | 13.5 |
| 35-39 | 11.2 | 11.4 | 11.0 |
| 40-44 | 8.9 | 9.1 | 8.6 |
| 45-49 | 6.8 | 6.9 | 6.7 |
| 50-54 | 5.7 | 5.7 | 5.6 |
| 55-59 | 3.6 | 3.8 | 3.4 |
| 60-64 | 2.6 | 2.8 | 2.4 |
| 65-69 | 1.5 | 1.4 | 1.2 |
| 70+ | 2.8 | 3.0 | 2.6 |

11

Percentage distribution of households heads with desktop/laptop by sex

| | Both Sexes | Male Headed | Female Headed |
|----------------------|------------|-------------|---------------|
| All Regions | 7.9 | 8.9 | 6.1 |
| Western | 6.5 | 7.2 | 5.2 |
| Central | 5.3 | 6.8 | 3.2 |
| Greater Accra | 16.8 | 19.0 | 12.9 |
| Volta | 3.0 | 3.7 | 2.0 |
| Eastern | 5.2 | 6.1 | 3.5 |
| Ashanti | 9.3 | 10.5 | 7.1 |
| Brong Ahafo | 4.6 | 5.2 | 3.5 |
| Northern | 2.9 | 2.8 | 3.9 |
| Upper East | 3.1 | 3.3 | 2.6 |
| Upper West | 3.7 | 3.8 | 3.1 |

12

The highest proportions of households owning desktop/laptop computer had heads who were in the age groups 25-29 (14.6%) and 30-34 (14.2%) age groups

Households ownership of desktop/laptop computers by age distribution of household head

| Age Group | Total | | Male | | Female | |
|-----------|---------|---------|---------|---------|---------|---------|
| | Number | Percent | Number | Percent | Number | Percent |
| All Ages | 431,917 | 100 | 316,639 | 100 | 115,278 | 100 |
| 15-19 | 4,858 | 1.1 | 3,293 | 1.0 | 1,565 | 1.4 |
| 20-24 | 35,081 | 8.1 | 26,050 | 8.2 | 9,031 | 7.8 |
| 25-29 | 63,267 | 14.6 | 48,592 | 15.3 | 14,675 | 12.7 |
| 30-34 | 61,348 | 14.2 | 48,803 | 15.4 | 12,545 | 10.9 |
| 35-39 | 50,270 | 11.6 | 38,511 | 12.2 | 11,759 | 10.2 |
| 40-44 | 47,133 | 10.9 | 34,130 | 10.8 | 13,003 | 11.3 |
| 45-49 | 43,734 | 10.1 | 30,871 | 9.7 | 12,863 | 11.2 |
| 50-54 | 42,909 | 9.9 | 30,014 | 9.5 | 12,895 | 11.2 |
| 55-59 | 31,384 | 7.3 | 22,376 | 7.1 | 9,008 | 7.8 |
| 60-64 | 21,052 | 4.9 | 14,590 | 4.6 | 6,462 | 5.6 |
| 65-69 | 11,448 | 2.7 | 7,645 | 2.4 | 3,803 | 3.3 |
| 70+ | 19,433 | 4.5 | 11,764 | 3.7 | 7,669 | 6.7 |

13

use of Internet facilities increased from age 12-14 years, peaking at age 20-24 years and declined thereafter with increasing age

Population 12 years and older using internet facility by age and sex

| Age Group | Total | | Males | | Females | |
|-----------|-----------|---------|---------|---------|---------|---------|
| | Number | Percent | Number | Percent | Number | Percent |
| All Ages | 1,312,971 | 100 | 832,789 | 100 | 480,182 | 100 |
| 12-14 | 52,889 | 4.0 | 29,821 | 3.6 | 23,068 | 4.8 |
| 15-19 | 223,394 | 17.0 | 128,946 | 15.5 | 94,448 | 19.7 |
| 20-24 | 349,551 | 26.6 | 211,897 | 25.4 | 137,654 | 28.7 |
| 25-29 | 253,085 | 19.3 | 160,250 | 19.2 | 92,835 | 19.3 |
| 30-34 | 149,036 | 11.4 | 101,619 | 12.2 | 47,417 | 9.9 |
| 35-39 | 89,520 | 6.8 | 63,233 | 7.6 | 26,287 | 5.5 |
| 40-44 | 60,780 | 4.6 | 42,737 | 5.1 | 18,043 | 3.8 |
| 45-49 | 45,267 | 3.4 | 31,364 | 3.8 | 13,903 | 2.9 |
| 50-54 | 36,956 | 2.8 | 25,682 | 3.1 | 11,274 | 2.3 |
| 55-59 | 23,329 | 1.8 | 16,790 | 2.0 | 6,539 | 1.4 |
| 60-64 | 12,190 | 0.9 | 8,860 | 1.1 | 3,330 | 0.7 |
| 65-69 | 5,577 | 0.4 | 4,022 | 0.5 | 1,555 | 0.3 |
| 70 + | 11,397 | 0.9 | 7,568 | 0.9 | 3,829 | 0.8 |

14

RECOMMENDATIONS AND CONCLUSION

- It is very important to collect ICT statistics using household surveys and census, to make informed decisions on specific areas that need policy attention such as underserved areas, rural areas, to set-up Internet centers in public places, etc
- Mobile phone use is extensive but it is important to measure mobile ownership
- More regular data collection is necessary to monitor the evolution of ICT adoption and monitor the divides (urban-rural, gender, etc)

Why SDGs?

Humanity Has Entered A New Era

“For man holds in his mortal hands
the power to abolish all forms of human
poverty and all forms of human life.”

-JFK Inaugural Address
January 20, 1963

Figure 1. Gini Coefficients for U.S. Households, 1968-2010

Motivations for the SDGs:

Public Awareness

Activism

Knowledge Communities

Political and Corporate Accountability

PROPOSED SDGs:

1. END EXTREME POVERTY
2. JOBS AND GROWTH
3. SOCIAL INCLUSION FOR WOMEN, MINORITIES, YOUTH
4. EDUCATION FOR ALL
5. HEALTH FOR ALL
6. FOOD SECURITY FOR ALL
7. FIGHT CLIMATE CHANGE WITH SUSTAINABLE ENERGY
8. BIODIVERSITY CONSERVATION
9. RESILIENT CITIES
10. GOOD GOVERNANCE FOR SUSTAINABLE DEVELOPMENT

KEY ROLES FOR ICT:

ICT FOR HEALTH
ICT FOR EDUCATION
ICT FOR SUSTAINABLE AGRICULTURE
ICT FOR SMART ENERGY SYSTEMS
ICT FOR SMART URBAN NETWORKS
ICT FOR IMPLEMENTING THE SDGS

THE NEED FOR TRUE PUBLIC-PRIVATE PARTNERSHIPS

TIMELINE TO THE SDGS

SPRING 2014, OPEN WORKING GROUP REPORT

SEPTEMBER 2014, CLIMATE SUMMIT AT UN

FALL 2014, SECRETARY-GENERAL'S RECOMMENDATIONS

FIRST-HALF 2015, INTERGOVERNMENTAL NEGOTIATIONS

SEPTEMBER 2015, SDG SUMMIT AT UN

NOVEMBER 2015, CLIMATE NEGOTIATIONS IN PARIS

We choose to go to the moon. We choose to go to the moon in this decade and do the other things, not because they are easy, but because they are hard, because that goal will serve to organize and measure the best of our energies and skills, because that challenge is one that we are willing to accept, one we are unwilling to postpone, and one which we intend to win, and the others, too.

President John F. Kennedy, Rice University,

IMT Concept*

From: Recommendation ITU-R M.1224-1

International Mobile Telecommunications (IMT) systems are mobile systems that provide access to a wide range of telecommunication services including advanced mobile services, supported by mobile and fixed networks, which are increasingly packet-based

IMT systems support low to high mobility applications and a wide range of data rates in accordance with user and service demands in multiple user environments. IMT also has capabilities for high quality multimedia applications within a wide range of services and platforms, providing a significant improvement in performance and quality of service.

* IMT encompasses both IMT-2000 & IMT-Advanced

IMT Key Features

From: Recommendation ITU-R M.1224-1

1. A high degree of commonality of functionality worldwide while retaining the flexibility to support a wide range of services and applications in a cost efficient manner;
2. Compatibility of services within IMT and with fixed networks;
3. Capability of interworking with other radio access systems;
4. High quality mobile services;
5. User equipment suitable for worldwide use;
6. User-friendly applications, services and equipment;
7. Worldwide roaming capability;
8. Enhanced peak data rates to support advanced services and applications.

These features enable IMT to address evolving user needs and the capabilities of IMT systems are being continuously enhanced in line with user trends and technology developments

IMT vs. xG

IMT:

Devised within ITU through the work of *ITU Study Groups* (worldwide participation, amongst all stakeholders: regulators, operators, manufactures, universities and R&D Centers, Regional Organizations, etc.)

Unique set of Definitions and Specifications (through ITU-R publications)

xG:

Devised by operators and mobile community.

There is no unique set of definitions and specifications.

IMT-2000 and 3G: there was consensus about matching both these concepts and associated specifications.

IMT-Advanced and 4G: no consensus has been yet reached:

- Some Regulators demand that a 4G brand must comply with IMT-Advanced specifications.
- Other Regulators recognize 4G as those technologies providing an enhanced performance in comparison to IMT-2000 Specifications.

IMT Technical Indicators

| INDICATORS | NATIONAL DEPLOYMET OF MOBILE BROADBAND (IMT) |
|------------|---|
| USERS | Subscriptions/Subscribers of broadband mobile (IMT Systems) |
| BANDS | IMT Bands (decided by WRCs) being brought into service for mobile broadband (IMT Systems) |

This technical indicators might be joined to other info (economic, social, etc.) to merge new key indicators (e.g. Broadband price Basket, etc.)

Also important to review spectrum authorized for particular license-exempted devices (General Use License), as: Wi-Fi

IMT INDICATORS: Info to Collect
