Recommendation ITU-T H.830.5

ITU-T H-SERIES RECOMMENDATIONS  
AUDIOVISUAL AND MULTIMEDIA SYSTEMS

CHARACTERISTICS OF VISUAL TELEPHONE SYSTEMS	H.100–H.199
INFRASTRUCTURE OF AUDIOVISUAL SERVICES	
General	H.200–H.219
Transmission multiplexing and synchronization	H.220–H.229
Systems aspects	H.230–H.239
Communication procedures	H.240–H.259
Coding of moving video	H.260–H.279
Related systems aspects	H.280–H.299
Systems and terminal equipment for audiovisual services	H.300–H.349
Directory services architecture for audiovisual and multimedia services	H.350–H.359
Quality of service architecture for audiovisual and multimedia services	H.360–H.369
Telepresence	H.420–H.429
Supplementary services for multimedia	H.450–H.499
MOBILITY AND COLLABORATION PROCEDURES	
Overview of Mobility and Collaboration, definitions, protocols and procedures	H.500–H.509
Mobility for H-Series multimedia systems and services	H.510–H.519
Mobile multimedia collaboration applications and services	H.520–H.529
Security for mobile multimedia systems and services	H.530–H.539
Security for mobile multimedia collaboration applications and services	H.540–H.549
Mobility interworking procedures	H.550–H.559
Mobile multimedia collaboration inter-working procedures	H.560–H.569
BROADBAND, TRIPLE-PLAY AND ADVANCED MULTIMEDIA SERVICES	
Broadband multimedia services over VDSL	H.610–H.619
Advanced multimedia services and applications	H.620–H.629
Ubiquitous sensor network applications and Internet of Things	H.640–H.649
IPTV MULTIMEDIA SERVICES AND APPLICATIONS FOR IPTV	
General aspects	H.700–H.719
IPTV terminal devices	H.720–H.729
IPTV middleware	H.730–H.739
IPTV application event handling	H.740–H.749
IPTV metadata	H.750–H.759
IPTV multimedia application frameworks	H.760–H.769
IPTV service discovery up to consumption	H.770–H.779
Digital Signage	H.780–H.789
E-HEALTH MULTIMEDIA SERVICES AND APPLICATIONS	
Personal health systems	H.810–H.819
<b>    Interoperability compliance testing of personal health systems (HRN, PAN, LAN, TAN and WAN)</b>	<b>H.820–H.859</b>
Multimedia e-health data exchange services	H.860–H.869

# **Recommendation ITU-T H.830.5**

## **Conformance of ITU-T H.810 personal health devices: WAN interface Part 5: PCD-01 HL7 messages: Sender**

### **Summary**

Recommendation ITU-T H.830.5 is the transposition of Continua Health Alliance Test Tool DG2013, Test Suite Structure & Test Purposes, WAN Interface; Part 5: PCD-01 HL 7 Messages. Sender (Version 1.4, 2014-01-24), that was developed by the Continua Health Alliance. A number of versions of this specification existed before transposition.

This Recommendation includes an electronic attachment with the protocol implementation conformance statements (PICS) and the protocol implementation extra information for testing (PIXIT) required for the implementation of Annex A.

This Recommendation was initially approved as ITU-T H.835 (01/2015) and later renumbered, without further modifications, as ITU-T H.830.5 (01/2015) for consistency with the numbering of new WAN interface conformance testing specifications.

### **History**

Edition	Recommendation	Approval	Study Group	Unique ID*
1.0	ITU-T H.835	2015-01-13	16	<a href="http://handle.itu.int/11.1002/1000/12253">11.1002/1000/12253</a>

## FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications, information and communication technologies (ICTs). The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

## NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure, e.g., interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

## INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU had not received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database at <http://www.itu.int/ITU-T/ipr/>.

## **Introduction**

This Recommendation is the transposition of Continua Health Alliance Test Tool DG2013, Test Suite Structure & Test Purposes, WAN Interface; Part 5: PCD-01 HL 7 Messages. Sender (Version 1.4, 2014-01-24), that was developed by the Continua Health Alliance. A number of versions of this specification existed before transposition and these can be found in the table below.

<b>Version</b>	<b>Date</b>	<b>Revision history</b>
1.2	2012-10-05	Initial release for Test Tool DG2011. This is the same version as "TSS&TP_1.5_WAN_PART_5_(SEN PCD-01)_v1.2.doc" because new features included in [b-CDG 2011] do not affect the test procedures specified in this document.
1.3	2013-05-24	Initial release for Test Tool DG2012. This uses "TSS&TP_DG2011_WAN_PART_5_(SEN PCD-01)_v1.2" as a baseline and adds new features included in [b-CDG 2012]: <ul style="list-style-type: none"><li>– Addition of glucose meter new spec. version</li><li>– Addition of body composition analyser device specialization</li><li>– Addition of basic electrocardiograph device specialization</li></ul>
1.4	2014-01-24	Initial release for Test Tool DG2013. This uses "TSS&TP_DG2012_WAN_PART_5_(SEN PCD-01)_v1.3.doc" as a baseline and adds new features included in [b-ITU-T H.810 (2013)]: <ul style="list-style-type: none"><li>– Addition of glucose meter BLE</li><li>– Addition of BLE SSP support</li><li>– Addition of NFC new transport</li><li>– Addition of INR device specialization</li></ul>

# Recommendation ITU-T H.830.5

## Conformance of ITU-T H.810 personal health devices: WAN interface Part 5: PCD-01 HL7 messages: Sender

### 1 Scope

The scope of this Recommendation<sup>1</sup> is to provide a test suite structure and the test purposes (TSS & TP) for the WAN interface based on the requirements defined in the Continua Design Guidelines (CDG) [ITU-T H.810 (2015)]. The objective of this test specification is to provide a high probability of air interface interoperability between different devices.

TSS & TP for the WAN interface have been divided into the eight parts specified below. This Recommendation covers Part 5.

- **Part 1:** Web Services Interoperability. Sender
- **Part 2:** Web Services Interoperability. Receiver
- **Part 3:** SOAP/ATNA. Sender
- **Part 4:** SOAP/ATNA. Receiver
- **Part 5: PCD-01 HL7 Messages. Sender**
- **Part 6:** PCD-01 HL7 Messages. Receiver
- **Part 7:** Consent Management. Sender
- **Part 8:** Consent Management. Receiver

### 2 References

The following ITU-T Recommendations and other references contain provisions which, through reference in this text, constitute provisions of this Recommendation. At the time of publication, the editions indicated were valid. All Recommendations and other references are subject to revision; users of this Recommendation are therefore encouraged to investigate the possibility of applying the most recent edition of the Recommendations and other references listed below. A list of the currently valid ITU-T Recommendations is regularly published. The reference to a document within this Recommendation does not give it, as a stand-alone document, the status of a Recommendation.

<sup>1</sup> This Recommendation includes an electronic attachment with the protocol implementation conformance statements (PICS) and the protocol implementation extra information for testing (PIXIT) required for the implementation of Annex A.

### **3 Definitions**

#### **3.1 Terms defined elsewhere**

This Recommendation uses the following terms defined elsewhere:

**3.1.1 agent** [IEEE 11073-20601A]: A node that collects and transmits personal health data to an associated manager.

**3.1.2 manager** [IEEE 11073-20601A]: A node receiving data from one or more agent systems. Some examples of managers include a cellular phone, health appliance, set top box, or a computer system.

#### **3.2 Terms defined in this Recommendation**

None.

### **4 Abbreviations and acronyms**

This Recommendation uses the following abbreviations and acronyms:

AHD	Application Hosting Device
ATNA	Audit Trail and Node Authentication
ATS	Abstract Test Suite
CDG	Continua Design Guidelines
DUT	Device Under Test
GUI	Graphical User Interface
HL7	Health Level 7
HTTP	Hypertext Transfer Protocol
HTTPS	Hypertext Transfer Protocol Secure
INR	International Normalized Ratio
IUT	Implementation Under Test
MDS	Medical Device System
NFC	Near Field Communication
PCD	Patient Care Device
PCT	Protocol Conformance Testing
PCHA	Personal Connected Health Alliance
PHD	Personal Healthcare Device
PHDC	Personal Healthcare Device Class
PHM	Personal Health Manager
PICS	Protocol Implementation Conformance Statement
PIXIT	Protocol Implementation extra Information for Testing
SDP	Service Discovery Protocol
SABTE	Sleep Apnoea Breathing Therapy Equipment
SOAP	Simple Object Access Protocol

TCRL	Test Case Reference List
TCWG	Test and Certification Working Group
TLS	Transport Level Security
TP	Test Purpose
TSS	Test Suite Structure
URI	Uniform Resource Identifier
USB	Universal Serial Bus
WAN	Wide Area Network
WD	WAN Device
WDM	Windows Driver Model
WS	Web Service
WSDL	Web Service Description Language
XML	extensible Markup Language

## 5 Conventions

The key words "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "MAY", "MAY NOT" in this Recommendation are to be interpreted as in [b-ETSI SR 001 262].

- SHALL is equivalent to 'must' or 'it is required to'.
- SHALL NOT is equivalent to 'must not' or 'it is not allowed'.
- SHOULD is equivalent to 'it is recommended to'.
- SHOULD NOT is equivalent to 'it is not recommended to'.
- MAY is equivalent to 'is permitted'.
- MAY NOT is equivalent to 'it is not required that'.

NOTE – The above-mentioned key words are capitalized for illustrative purposes only and they do not appear capitalized within this Recommendation.

Reference is made in the ITU-T H.800-series of Recommendations to different versions of the Continua Design Guidelines (CDG) by a specific designation. The list of terms that may be used in this Recommendation is provided in Table 1.

**Table 1 – List of designations associated with the various versions of the CDG**

CDG release	Transposed as	Version	Description	Designation
2016 plus errata	[ITU-T H.810 (2016)]	6.1	Release 2016 plus errata noting all ratified bugs [ITU-T H.810 (2016)].	–
2016	–	6.0	Release 2016 of the CDG including maintenance updates of the CDG 2015 and additional guidelines that cover new functionalities.	Iris
2015 plus errata	[ITU-T H.810 (2015)]	5.1	Release 2015 plus errata noting all ratified bugs [ITU-T H.810 (2015)].	–
2015	–	5.0	Release 2015 of the CDG including maintenance updates of the CDG 2013 and additional guidelines that cover new functionalities.	Genome
2013 plus errata	[ITU-T H.810 (2013)]	4.1	Release 2013 plus errata noting all ratified bugs [b-ITU-T H.810 (2013)].	–
2013	–	4.0	Release 2013 of the CDG including maintenance updates of the CDG 2012 and additional guidelines that cover new functionalities.	Endorphin
2012 plus errata	–	3.1	Release 2012 plus errata noting all ratified bugs [b-CDG 2012].	–
2012	–	3.0	Release 2012 of the CDG including maintenance updates of the CDG 2011 and additional guidelines that cover new functionalities.	Catalyst
2011 plus errata	–	2.1	CDG 2011 integrated with identified errata.	–
2011	–	2.0	Release 2011 of the CDG including maintenance updates of the CDG 2010 and additional guidelines that cover new functionalities [b-CDG 2011].	Adrenaline
2010 plus errata	–	1.6	CDG 2010 integrated with identified errata	–
2010	–	1.5	Release 2010 of the CDG with maintenance updates of the CDG Version 1 and additional guidelines that cover new functionalities [b-CDG 2010].	1.5
1.0	–	1.0	First released version of the CDG [b-CDG 1.0].	–

## 6 Test suite structure (TSS)

The test purposes (TP) for the WAN interface have been divided into the main subgroups specified below. Annex A describes the TPs for subgroups 1.4.1 to 1.4.16 (shown in bold).

- Group 1: Sender (SEN)
  - Group 1.1: Web services interoperability (WSI)
    - Subgroup 1.1.1: Basic profile (BP)
    - Subgroup 1.1.2: Basic security profile (BSP)
    - Subgroup 1.1.3: Reliable messaging (RM)
  - Group 1.2: SOAP (SOAP)
    - Subgroup 1.2.1: SOAP headers (HEAD)
  - Group 1.3: Audit (ATNA)
    - Subgroup 1.3.1: General (GEN)
    - Subgroup 1.3.2: PCD-01 (PCD-01)
    - Subgroup 1.3.3: Consent management (CM)
  - Group 1.4: PCD-01 HL7 messages (PCD-01-DATA)
    - **Subgroup 1.4.1: General (GEN)**
    - **Subgroup 1.4.2: Design guidelines (DG)**
    - **Subgroup 1.4.3: Pulse oximeter (PO)**
    - **Subgroup 1.4.4: Blood pressure monitor (BPM)**
    - **Subgroup 1.4.5: Thermometer (TH)**
    - **Subgroup 1.4.6: Weighing scales (WEG)**
    - **Subgroup 1.4.7: Glucose meter (GL)**
    - **Subgroup 1.4.8: Cardiovascular fitness and activity monitor (CV)**
    - **Subgroup 1.4.9: Strength fitness equipment (ST)**
    - **Subgroup 1.4.10: Independent living activity hub (HUB)**
    - **Subgroup 1.4.11: Adherence monitor (AM)**
    - **Subgroup 1.4.12: Peak expiratory flow monitor (PF)**
    - **Subgroup 1.4.13: Body composition analyser (BCA)**
    - **Subgroup 1.4.14: Basic electrocardiograph (ECG)**
    - **Subgroup 1.4.15: International normalized ratio (INR)**
    - **Subgroup 1.4.16: Sleep apnoea breathing therapy equipment (SABTE)**
  - Group 1.5: Consent management (CM)
    - Subgroup 1.5.1: WAN XDR transaction (TRANS)
    - Subgroup 1.5.2: WAN metadata validation (META)
    - Subgroup 1.5.3: WAN consent directive validation (CDV)
  - Group 1.6: hData observation upload (HDATA)
    - Subgroup 1.6.1: General (GEN)
  - Group 1.7: Questionnaires (QUE)
    - Subgroup 1.7.1: General (GEN)
    - Subgroup 1.7.2: CDA validation (CDA)

- Group 2: Receiver (REC)
  - Group 2.1: Web service interoperability (WSI)
    - Subgroup 2.1.1: Basic profile (BP)
    - Subgroup 2.1.2: Basic security profile (BSP)
    - Subgroup 2.1.3: Reliable messaging (RM)
  - Group 2.2: SOAP (SOAP)
    - Subgroup 2.2.1: SOAP headers (HEAD)
  - Group 2.3: Audit (ATNA)
    - Subgroup 2.3.1: General (GEN)
    - Subgroup 2.3.2: PCD-01 (PCD-01)
    - Subgroup 2.3.3: Consent management (CM)
  - Group 2.4: PCD-01 HL7 messages (PCD-01-DATA)
    - Subgroup 2.4.1: General (GEN)
    - Subgroup 2.4.2: Design guidelines (DG)
    - Subgroup 2.4.3: Pulse oximeter (PO)
    - Subgroup 2.4.4: Blood pressure monitor (BPM)
    - Subgroup 2.4.5: Thermometer (TH)
    - Subgroup 2.4.6: Weighing scales (WEG)
    - Subgroup 2.4.7: Glucose meter (GL)
    - Subgroup 2.4.8: Cardiovascular fitness and activity monitor (CV)
    - Subgroup 2.4.9: Strength fitness equipment (ST)
    - Subgroup 2.4.10: Independent living activity hub (HUB)
    - Subgroup 2.4.11: Adherence monitor (AM)
    - Subgroup 2.4.12: Peak expiratory flow monitor (PF)
    - Subgroup 2.4.13: Body composition analyser (BCA)
    - Subgroup 2.4.14: Basic electrocardiograph (ECG)
    - Subgroup 2.4.15: International normalized ratio (INR)
    - Subgroup 2.4.16: Sleep apnoea breathing therapy equipment (SABTE)
  - Group 2.5: Consent management (CM)
    - Subgroup 2.5.1: WAN XDR transaction (TRANS)
    - Subgroup 2.5.2: WAN service validation (SER)
  - Group 2.6: hData observation upload (HDATA)
    - Subgroup 2.6.1: General (GEN)
    - Subgroup 2.6.2: hData record format (HRF)
  - Group 2.7: Questionnaires (QUE)
    - Subgroup 2.7.1: General (GEN)
    - Subgroup 2.7.2: CDA validation (CDA)
    - Subgroup 2.7.3: hData record format (HRF)

## **7      Electronic attachment**

The protocol implementation conformance statements (PICS) and the protocol implementation extra information for testing (PIXIT) required for the implementation of Annex A can be downloaded from <http://handle.itu.int/11.1002/2000/12067>.

In the electronic attachment, letters "C" and "I" in the column labelled "Mandatory" are used to distinguish between "PICS" and "PIXIT" respectively during testing. If the cell is empty, the corresponding PICS is "independent". If the field contains a "C", the corresponding PICS is dependent on other PICS, and the logical expression is detailed in the "SCR\_Expression" field. The static conformance review (SCR) is used in the test tool to assert whether the PICS selection is consistent.

## Annex A

### Test purposes

(This annex forms an integral part of this Recommendation.)

#### A.1 TP definition conventions

The test purposes (TPs) are defined according to the following rules:

- **TP Id:** This is a unique identifier (TP/<TT>/<DUT>/<GR>/<SGR>/<XX> – <NNN>). It is specified according to the naming convention defined below:
  - Each test purpose identifier is introduced by the prefix "TP".
  - <TT>: This is the test tool that will be used in the test case.
    - WAN: Wide area network
  - <DUT>: This is the device under test.
    - SEN: WAN observation sender
    - REC: WAN observation receiver
  - <GR>: This identifies a group of test cases.
  - <SGR>: This identifies a subgroup of test cases.
  - <XX>: This identifies the type of testing.
    - BV: Valid behaviour test
    - BI: Invalid behaviour test
  - <NNN>: This is a sequential number that identifies the test purpose.
- **TP label:** This is the title of the TP.
- **Coverage:** This contains the specification reference and clause to be checked by the TP.
  - Spec: This indicates the earliest version of the specification from which the testable items to be checked by the TP are included.
  - Testable item: This contains testable items to be checked by the TP.
- **Test purpose:** This is a description of the requirements to be tested.
- **Applicability:** This contains the PICS items that define if the test case is applicable or not for a specific device. When a TP contains an "ALL" in this field it means that it applies to the device under test within that scope of the test (specialization, transport used, etc.).
- **Other PICS:** This contains additional PICS items (apart from the PICS specified in the Applicability row) which are used within the test case implementation and can modify the final verdict. When this row is empty, it means that only the PICS specified in the Applicability row are used within the test case implementation.
- **Initial condition:** This indicates the state to which the DUT needs to be moved at the beginning of TC execution.
- **Test procedure:** This describes the steps to be followed in order to execute the test case.
- **Pass/Fail criteria:** This provides criteria to decide whether the DUT passes or fails the test case.

	[b-CDG 2012] – Appendices I and J			
	<b>Testable items</b>	DataGuidelines 22; M		
<b>Test purpose</b>	<p>Check that:</p> <p>The presence of the attributes of the Tidal volume Numeric Object, the Metric and Numeric attributes and their respective values.</p>			
<b>Applicability</b>	C_SEN_000 AND C_SEN_SABTE_001 AND C_SEN_SABTE_032			
<b>Other PICS</b>	C_SEN_GEN_003, C_SEN_GEN_004			
<b>Initial condition</b>	Simulated Receiver has published a WebService and Sender under test is ready to send a message with an Observation of an SABTE device with a Tidal volume Numeric Object			
<b>Test procedure</b>	<ol style="list-style-type: none"> <li>1. Make Sender under test to send a HL7 message containing an Observation of a SABTE device.</li> <li>2. Check in the captured message that: <ol style="list-style-type: none"> <li>a. The Tidal volume Numeric object has sent at least one observation.</li> <li>b. Handle attribute (MDC_ATTR_ID_HANDLE), Metric-Spec-Small attribute (MDC_ATTR_METRIC_SPEC_SMALL), Metric-Structure-Small attribute (MDC_ATTR_METRIC_STRUCT_SMALL) and Attribute-Value-Map attribute (MDC_ATTR_ATTRIBUTE_VALUE_MAP) are not present</li> </ol> </li> </ol>			

	<p>c. Each MDC code using CWE data type is encoded as:  <code>&lt;refIdValue&gt;^&lt;refIdName&gt;^&lt;refIdCodeSystem&gt;</code></p> <p>Where:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> refIdValue: is a 32 bit integer (required)</li> <li><input type="checkbox"/> refIdName: the normative nomenclature name for the unique code point (recommended)</li> <li><input type="checkbox"/> refIdCodeSystem = "MDC" (required).</li> </ul> <p>d. Tidal volume Numeric object follows this OBX encoding:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> OBX-2 = 'NM'</li> <li><input type="checkbox"/> OBX-3 = 8411169^MDC_SABTE_VOL_TIDAL_MIN^MDC or            8411170^MDC_SABTE_VOL_TIDAL_MAX^MDC or            8411171^MDC_SABTE_VOL_TIDAL_MEAN^MDC or            8411175^MDC_SABTE_VOL_TIDAL_P50^MDC or            8411177^MDC_SABTE_VOL_TIDAL_P90^MDC or            8411178^MDC_SABTE_VOL_TIDAL_P95^MDC or</li> <li><input type="checkbox"/> 8411179^MDC_SABTE_VOL_TIDAL_INSTANT^MDC</li> <li><input type="checkbox"/> OBX-4 = y.0.0.x, where 'y' and 'x' are numbers indicating the OBX-4 of the MDS-level and the metric level for the Tidal volume Numeric object respectively.</li> <li><input type="checkbox"/> OBX-5 = Numeric value</li> <li><input type="checkbox"/> OBX-6 = 264992^MDC_DIM_L_PER_MIN^MDC</li> </ul> <p>e. Any PM-Store, PM-Segment or Scanner attributes are not present.</p> <p>f. One of the timestamp attributes can be present:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> MDC_ATTR_TIME_STAMP_ABS or MDC_ATTR_TIME_STAMP_BO, mapped in OBX-14 of Observation Metric-level and encoded as:  <code>YYYY[MM[DD[HH[MM[SS]]]]][+/-ZZZZ]</code></li> <li><input type="checkbox"/> MDC_ATTR_TIME_STAMP_REL, transmitted as a Facet of the observation: <ul style="list-style-type: none"> <li>• OBX-5 = Numeric Value</li> <li>• OBX-18 has a timebase ID.</li> </ul> </li> <li><input type="checkbox"/> MDC_ATTR_TIME_STAMP_HI_RES, transmitted as a Facet of the observation. <ul style="list-style-type: none"> <li>• OBX-5 = Numeric Value</li> <li>• OBX-18 has a timebase ID.</li> </ul> </li> </ul>
<b>Pass/Fail criteria</b>	All elements in each segment are as specified
<b>Notes</b>

## **SERIES OF ITU-T RECOMMENDATIONS**

- Series A Organization of the work of ITU-T
- Series D General tariff principles
- Series E Overall network operation, telephone service, service operation and human factors
- Series F Non-telephone telecommunication services
- Series G Transmission systems and media, digital systems and networks
- Series H Audiovisual and multimedia systems**
- Series I Integrated services digital network
- Series J Cable networks and transmission of television, sound programme and other multimedia signals
- Series K Protection against interference
- Series L Environment and ICTs, climate change, e-waste, energy efficiency; construction, installation and protection of cables and other elements of outside plant
- Series M Telecommunication management, including TMN and network maintenance
- Series N Maintenance: international sound programme and television transmission circuits
- Series O Specifications of measuring equipment
- Series P Terminals and subjective and objective assessment methods
- Series Q Switching and signalling
- Series R Telegraph transmission
- Series S Telegraph services terminal equipment
- Series T Terminals for telematic services
- Series U Telegraph switching
- Series V Data communication over the telephone network
- Series X Data networks, open system communications and security
- Series Y Global information infrastructure, Internet protocol aspects and next-generation networks, Internet of Things and smart cities
- Series Z Languages and general software aspects for telecommunication systems
